

Introduction to Data Visualization

BAN140 - Section NBB /NCC

Mufleh Al-Shatnawi, Ph.D., P.Eng.,

Week Topics

Previous Week

- Lessons in storytelling

Current Week

- Pulling it all together

pulling it all together

Chapter Seven: From Storytelling with Data: A Data Visualization Guide for Business Professionals, Wiley, 2017

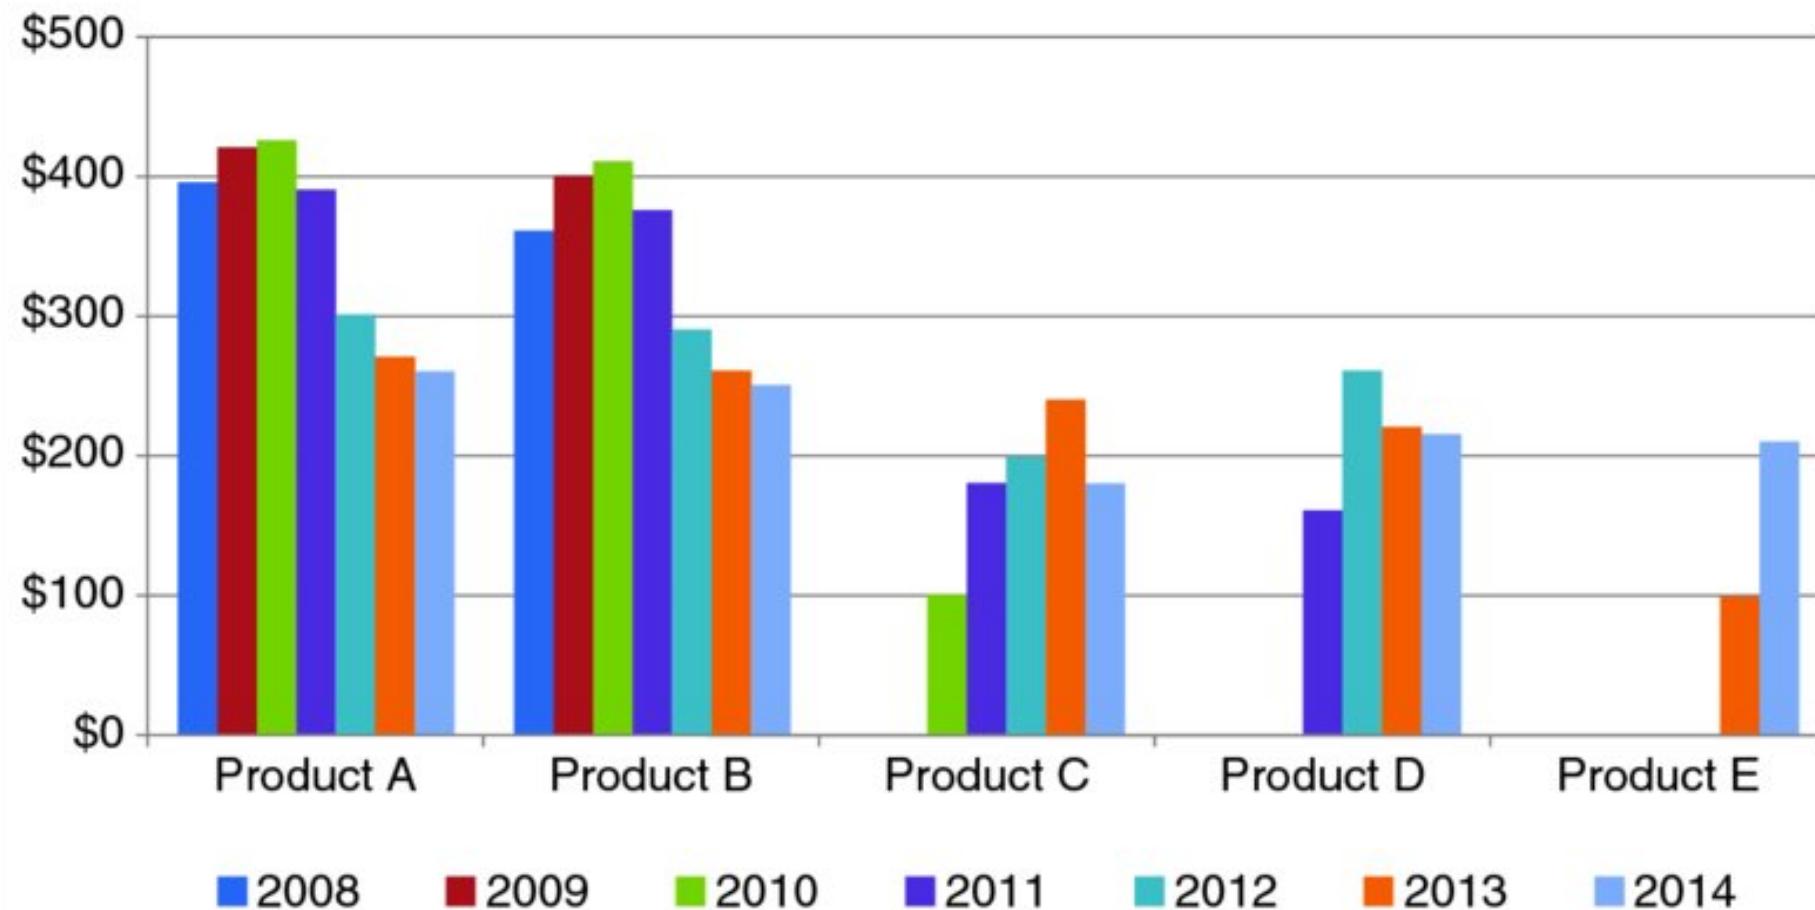

Available online through Seneca Libraries: https://senecacollege-primo.hosted.exlibrisgroup.com/permalink/f/t3376v/01SENC_ALMA5146374280003226

Pulling it all together

- What we learned so far:
 - Understand the context (Chapter 1)
 - Choose an appropriate display (Chapter 2)
 - Eliminate clutter (Chapter 3)
 - Draw attention where you want it (Chapter 4)
 - Think like a designer (Chapter 5)
 - Tell a story (Chapter 7)
- Now let's apply it all to an example

Price has declined for all products on the market
since the launch of Product C in 2010

Average Retail Product Price Per Year

Lesson 1: understand the context

- Identify a **specific audience** and what they need to know or do
 - ➔ Big Idea
- **Who:** VP of Product, the primary decision maker in establishing our product's price.
- **What:** Understand how competitors' pricing has changed over time and recommend a price range.
- **How:** Show average retail price over time for Products A, B, C, D, and E.
- **Big Idea:** Based on analysis of pricing in the market over time, to be competitive, we recommend introducing our product at a retail price in the range \$ABC–\$XYZ.

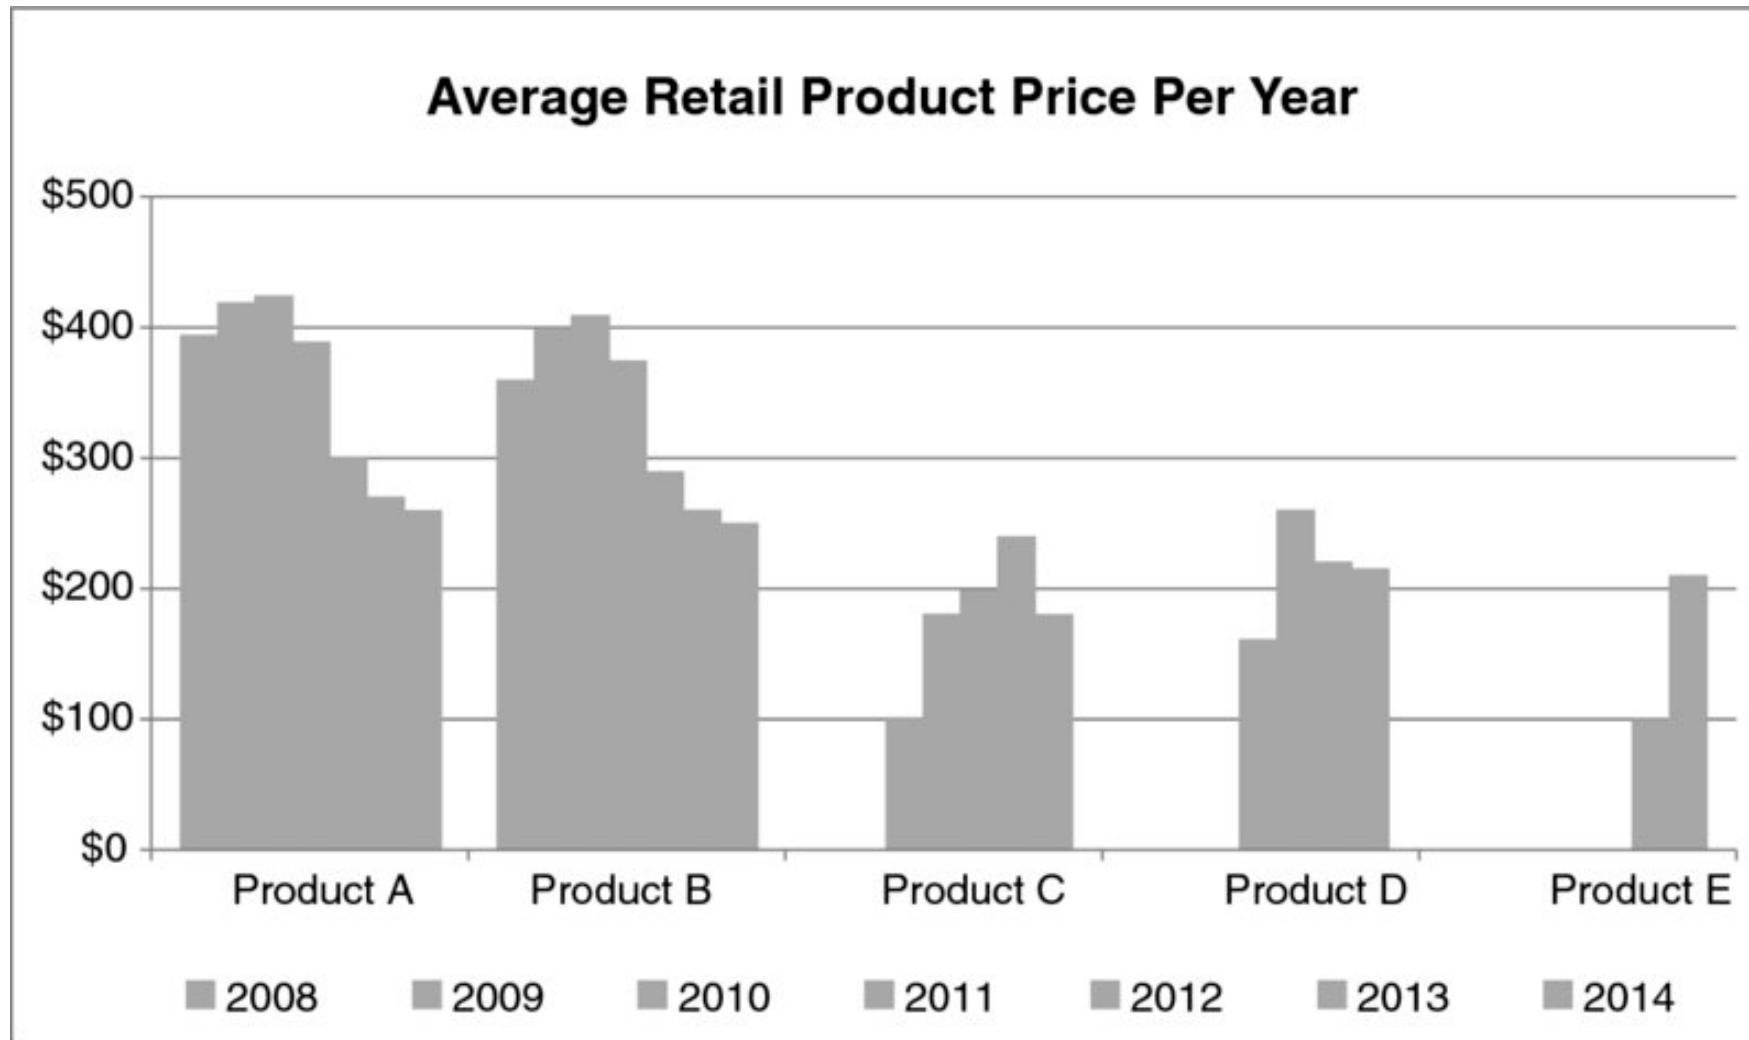

Lesson 2: choose an appropriate display

- Interested in the trend in price over time for each product.

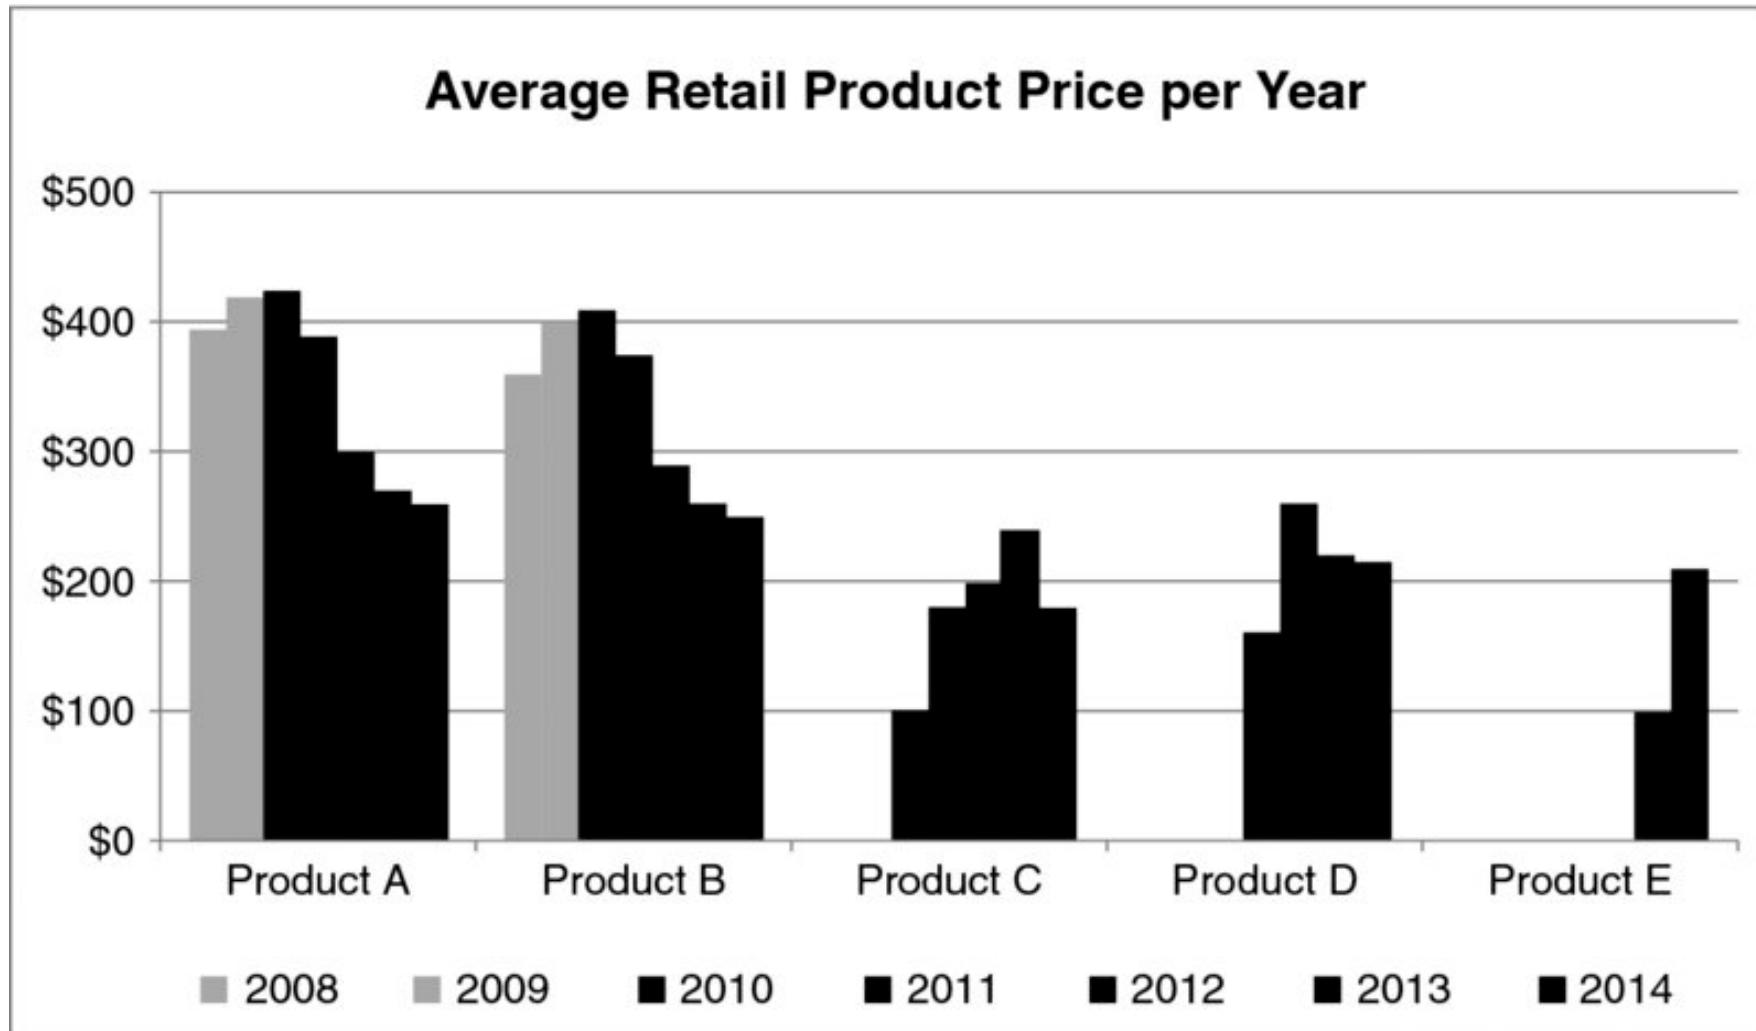

- Distractions:
 - Variance in colors across bars
 - Not highlighted the important data
 - Not a good graph type for trend over time

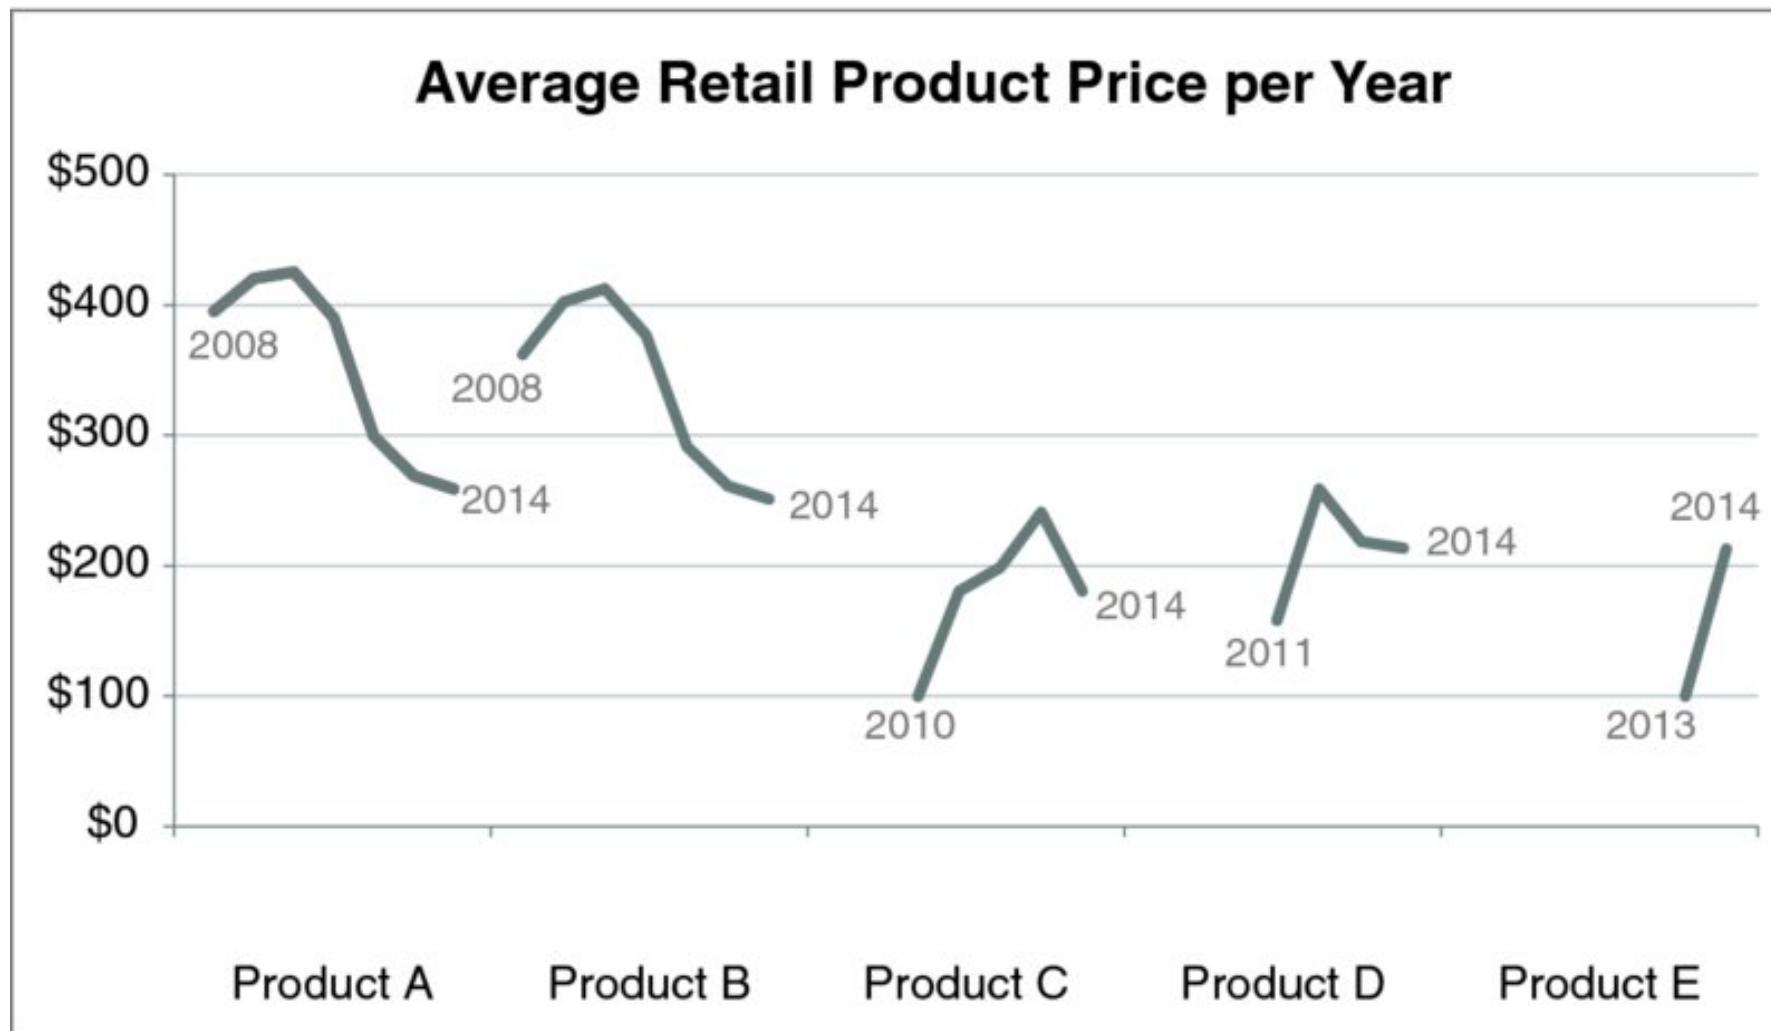

Remove the variance in color

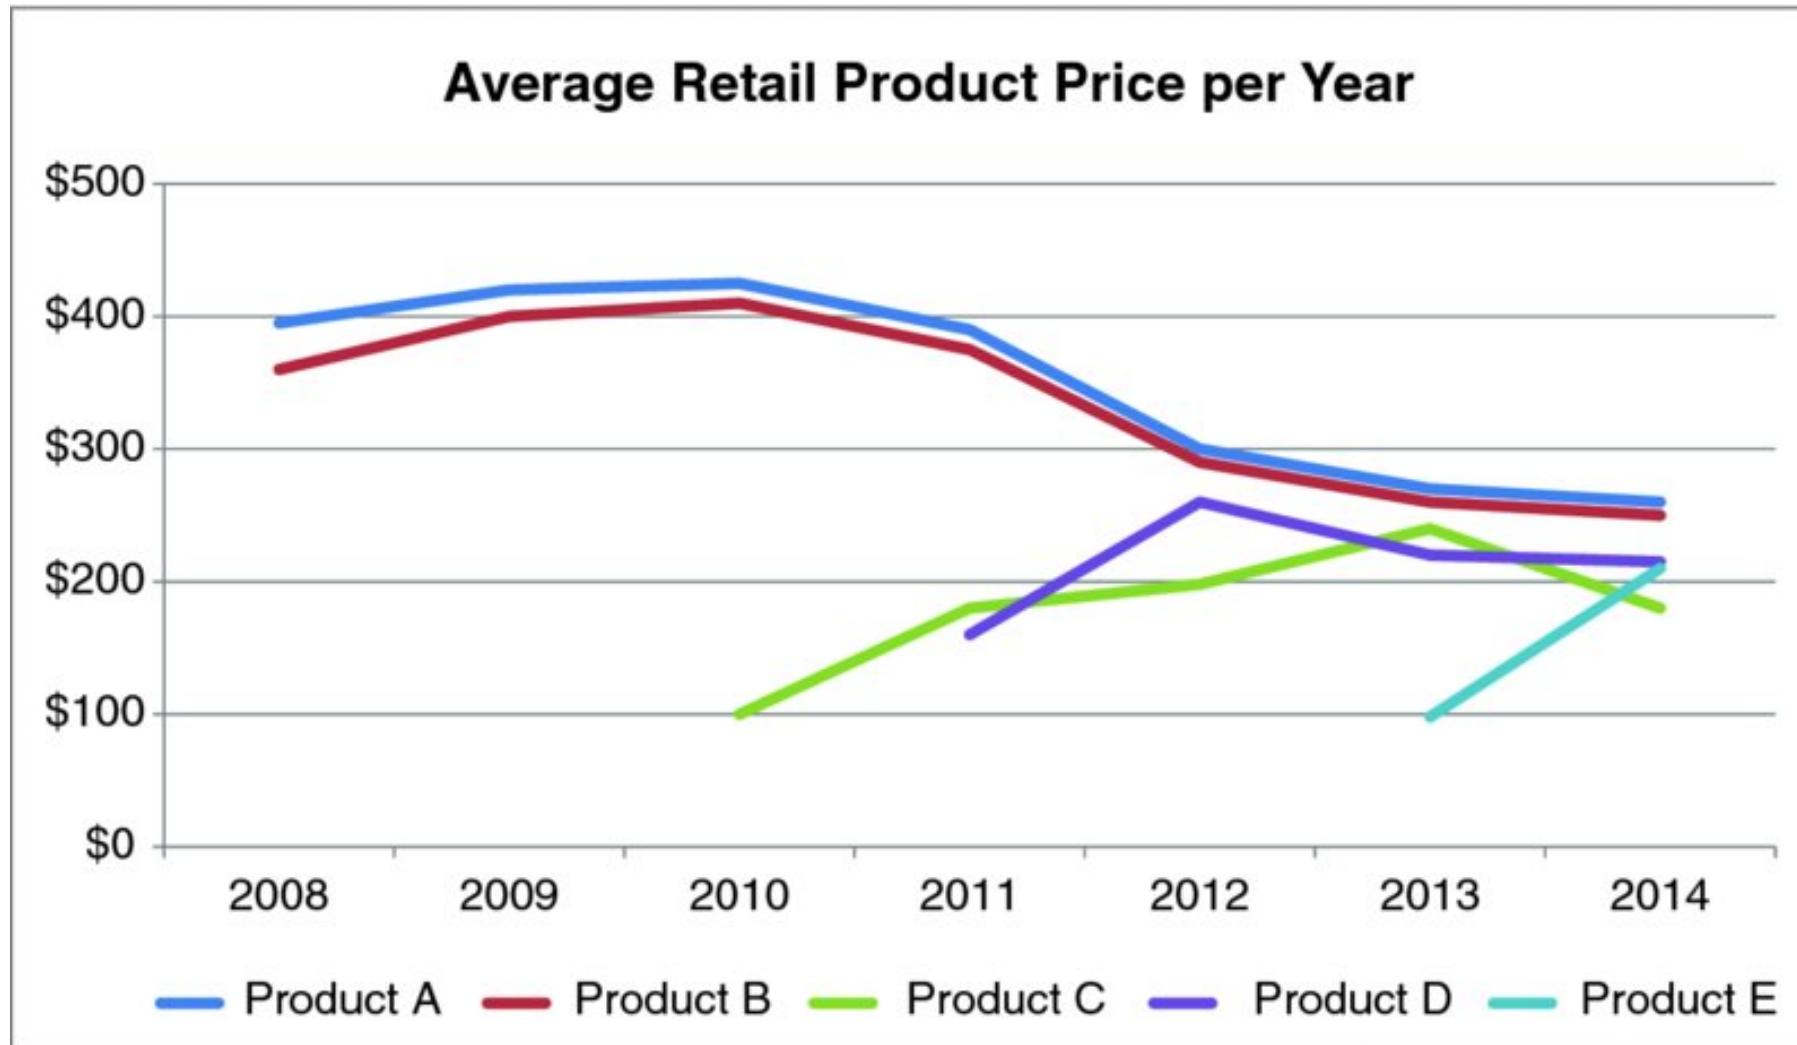

Emphasize 2010 forward

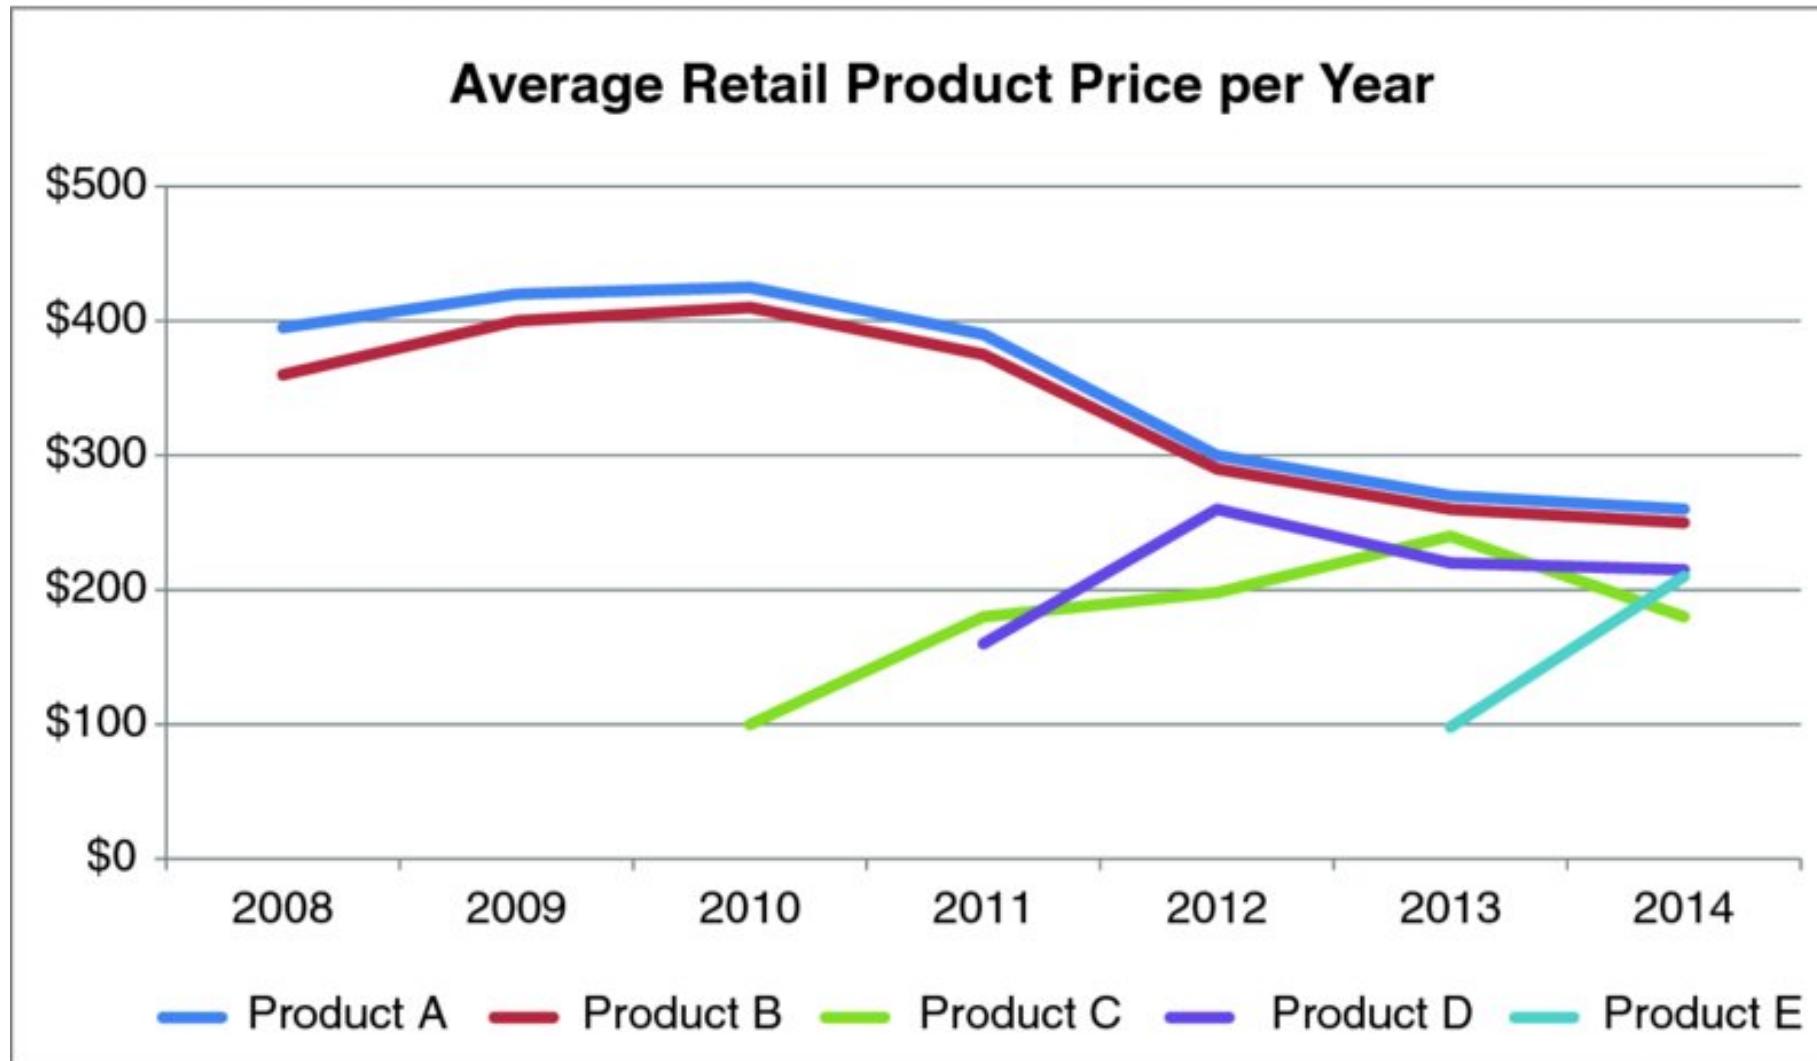

Change to line graph

Single line graph for all products

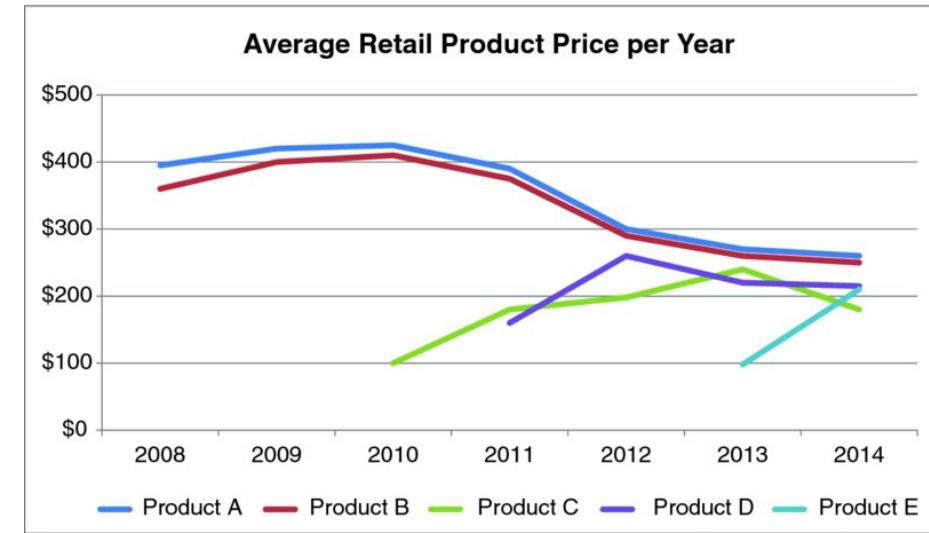

Lesson 3: eliminate clutter

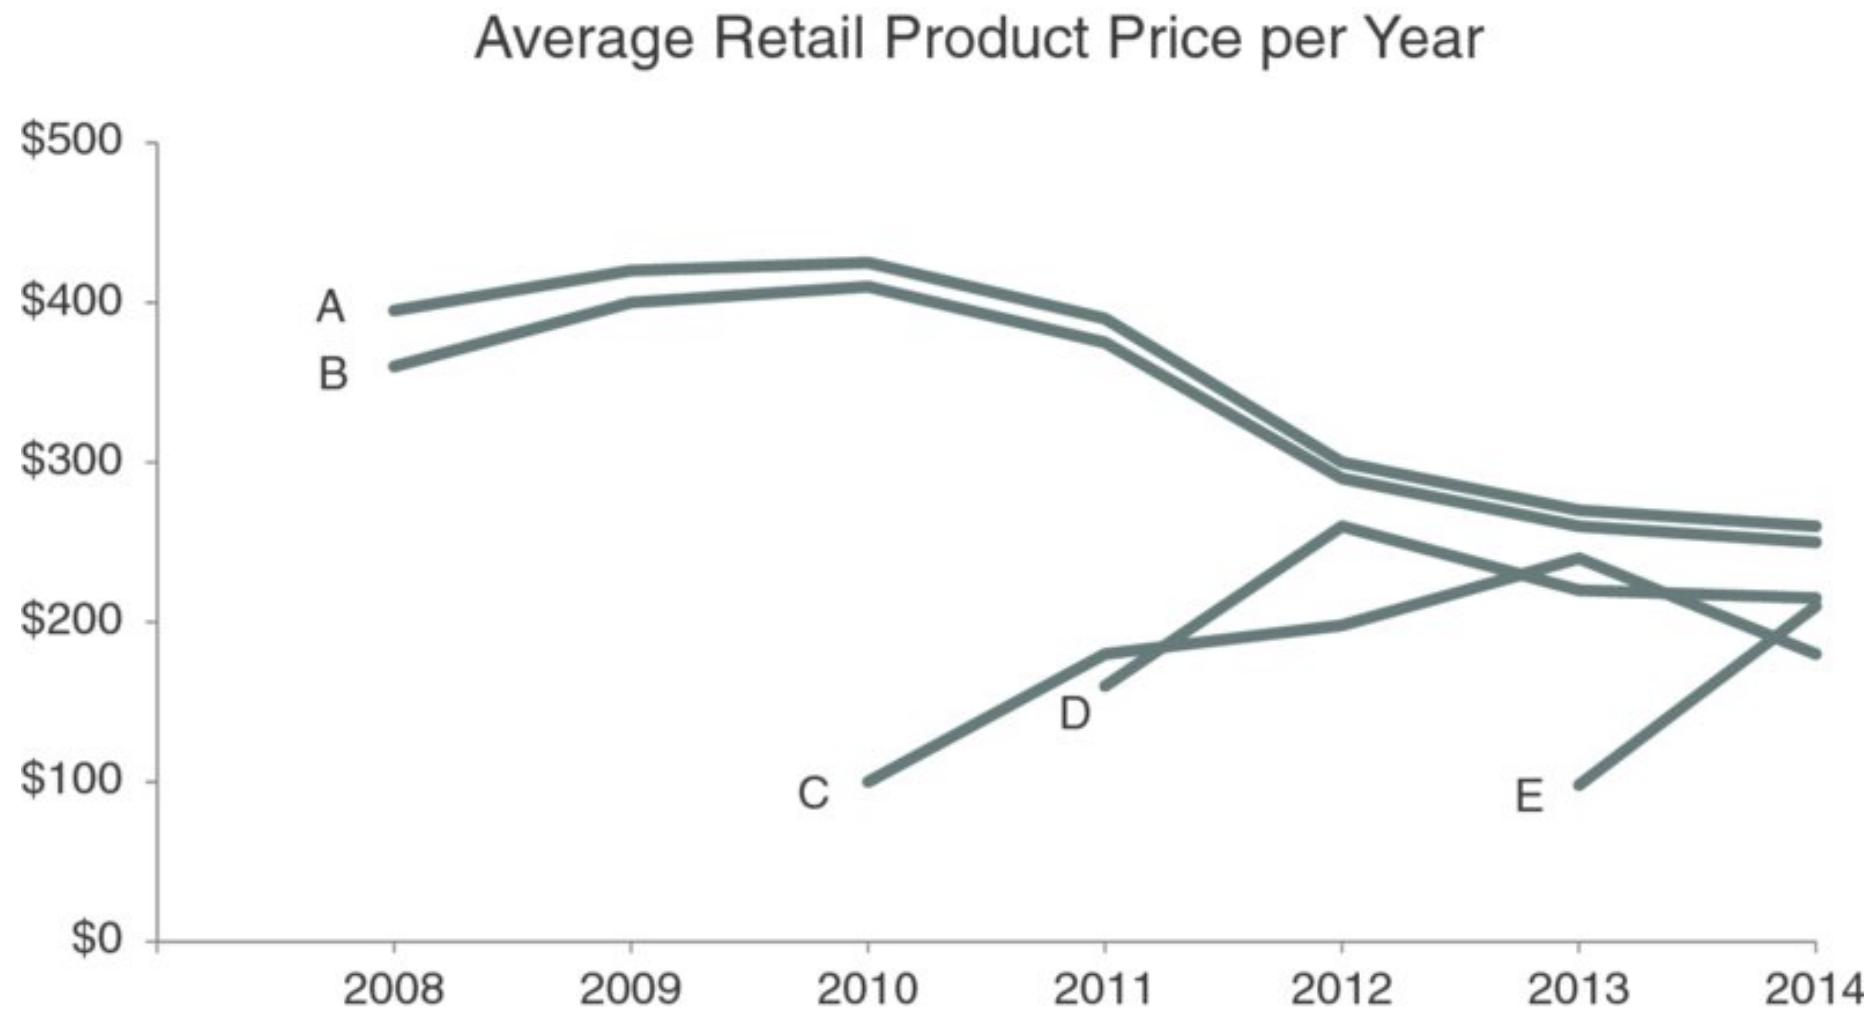

Lesson 3: eliminate clutter

- Starting from the last slide:
 - De-emphasize the chart title.
 - Remove chart border and gridlines.
 - De-emphasize the x- and y-axis lines ; alignment for x-axis tick marks.
 - Remove the variance in colors (then emphasize the story).
 - Label the lines directly.

Eliminate clutter

Lesson 4: draw attention where you want your audience to focus

➤ Initial headline:

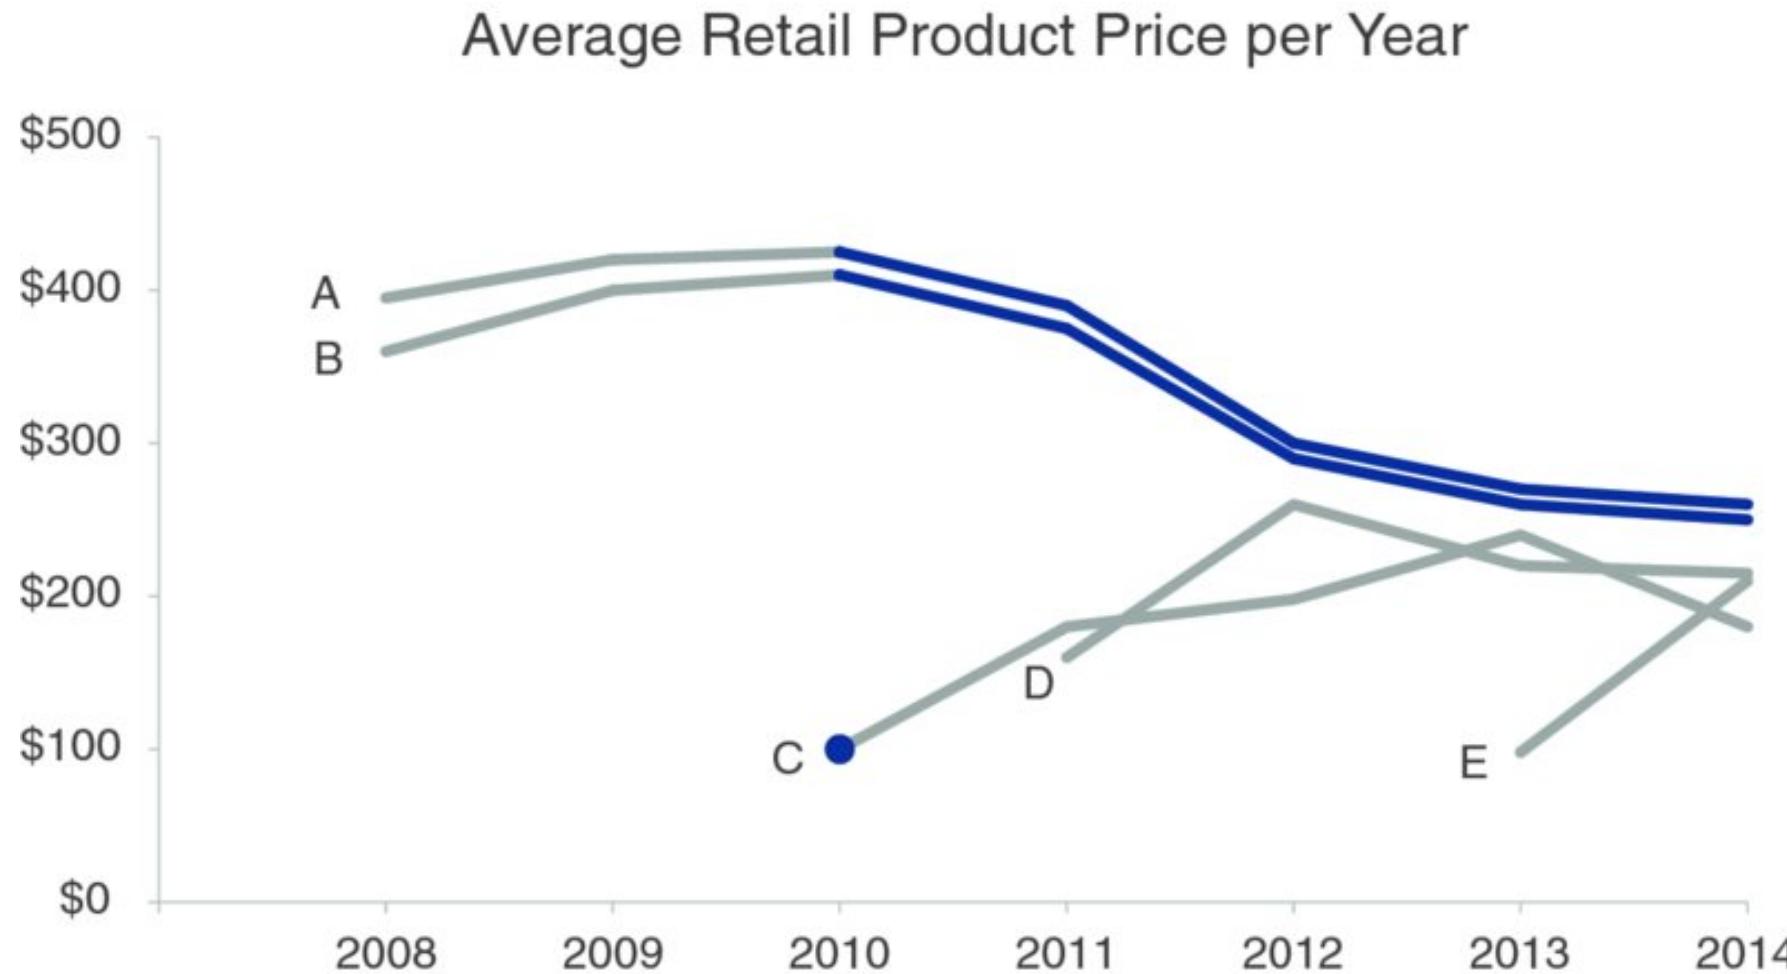

“Price has declined for all products on the market since the launch of Product C in 2010.”

➤ Modify it to:

“After the launch of Product C in 2010, the average retail price of existing products declined.”

Focus the audience's attention

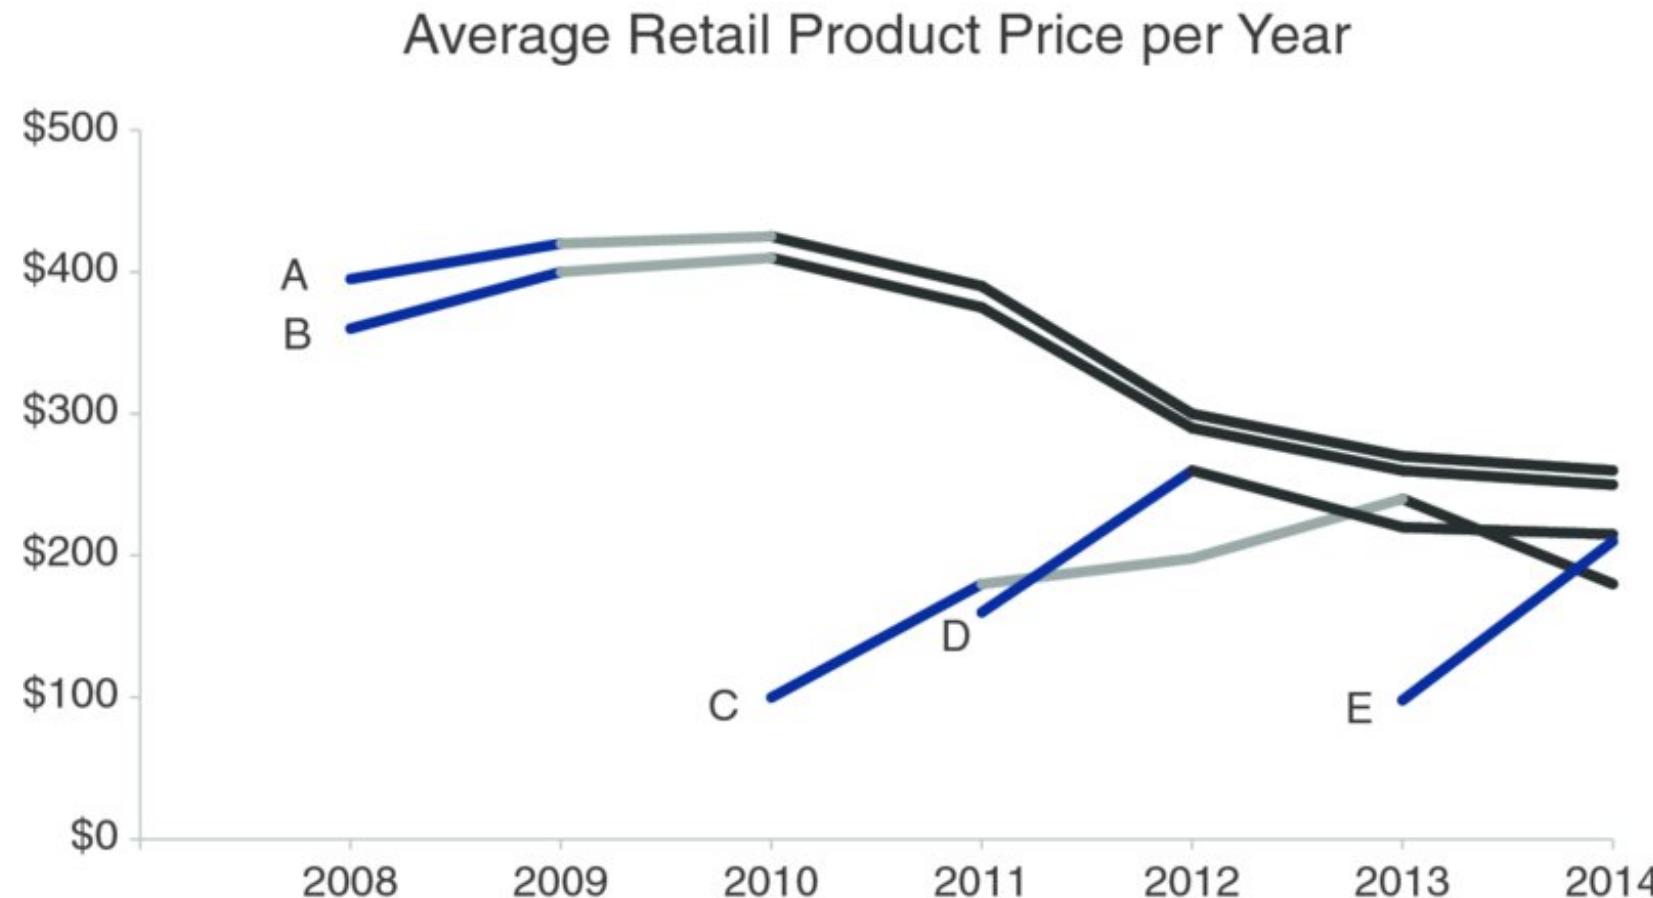

“After the launch of Product C in 2010, the average retail price of existing products declined.”

Refocus the audience's attention

Another story:

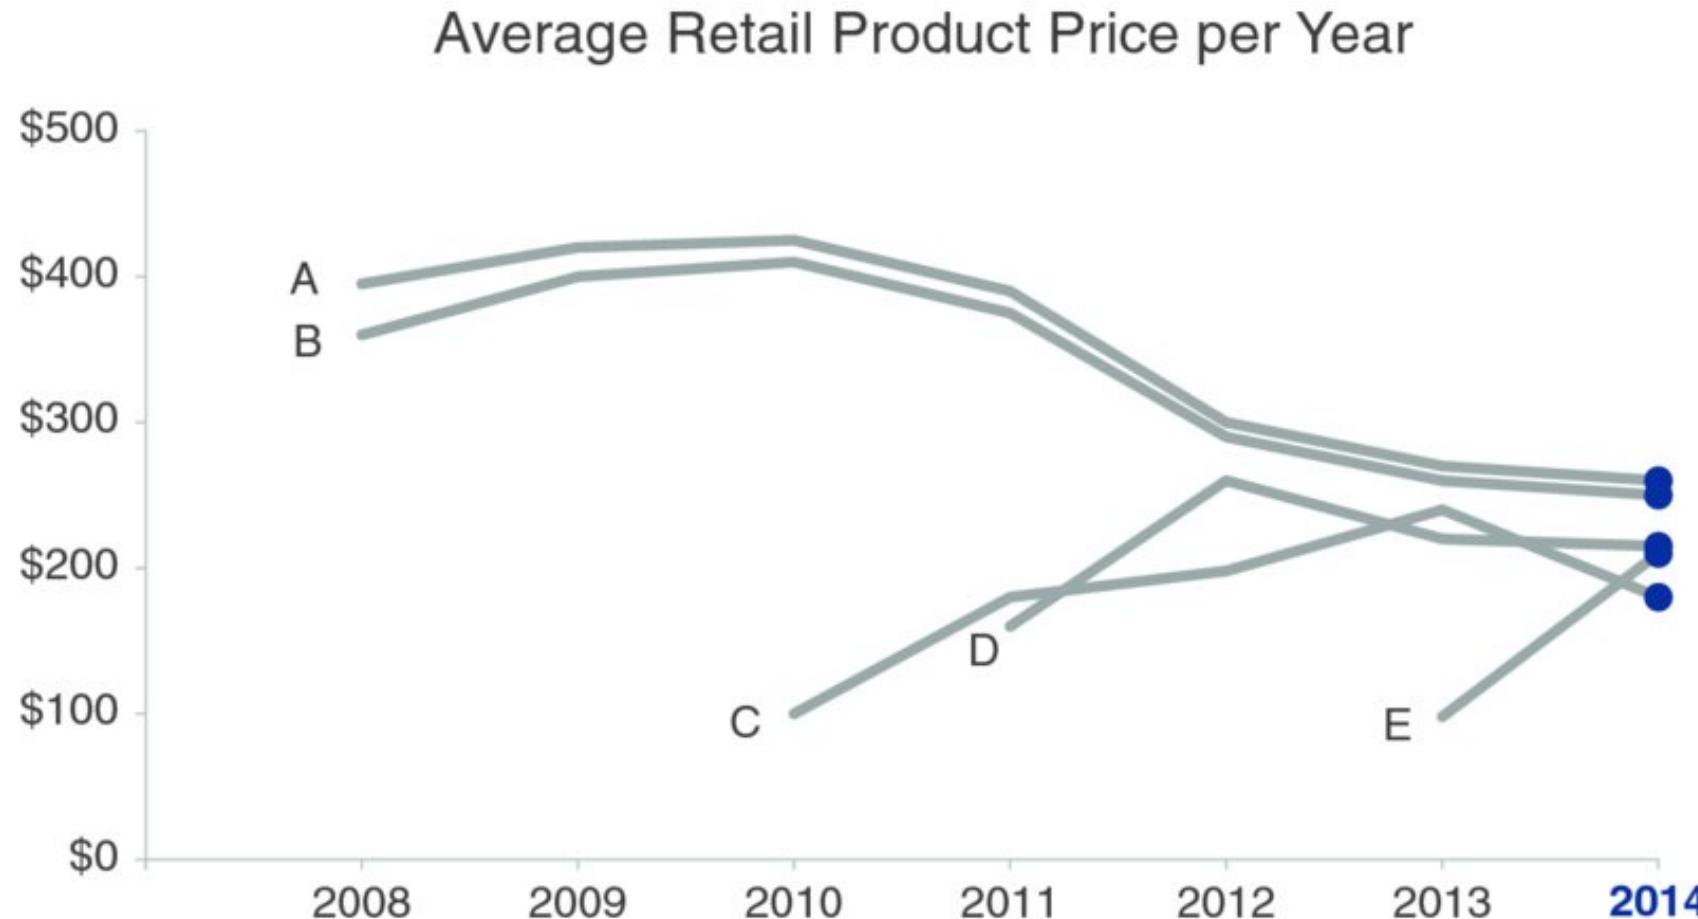

“With the launch of a new product in this space, it is typical to see an **initial average retail price increase, followed by a decline.**”

Refocus the audience's attention again

Another story:

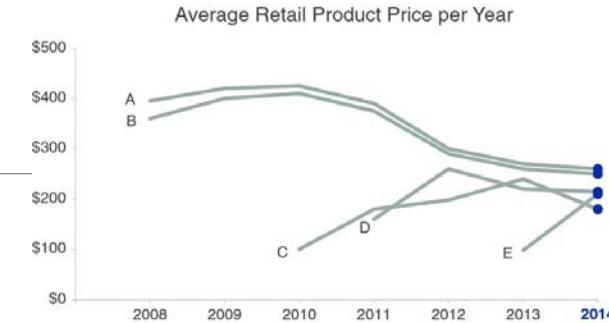

"As of 2014, retail prices have converged across products, with an **average retail price of \$223**, ranging from a low of \$180 (Product C) to a high of \$260 (Product A)."

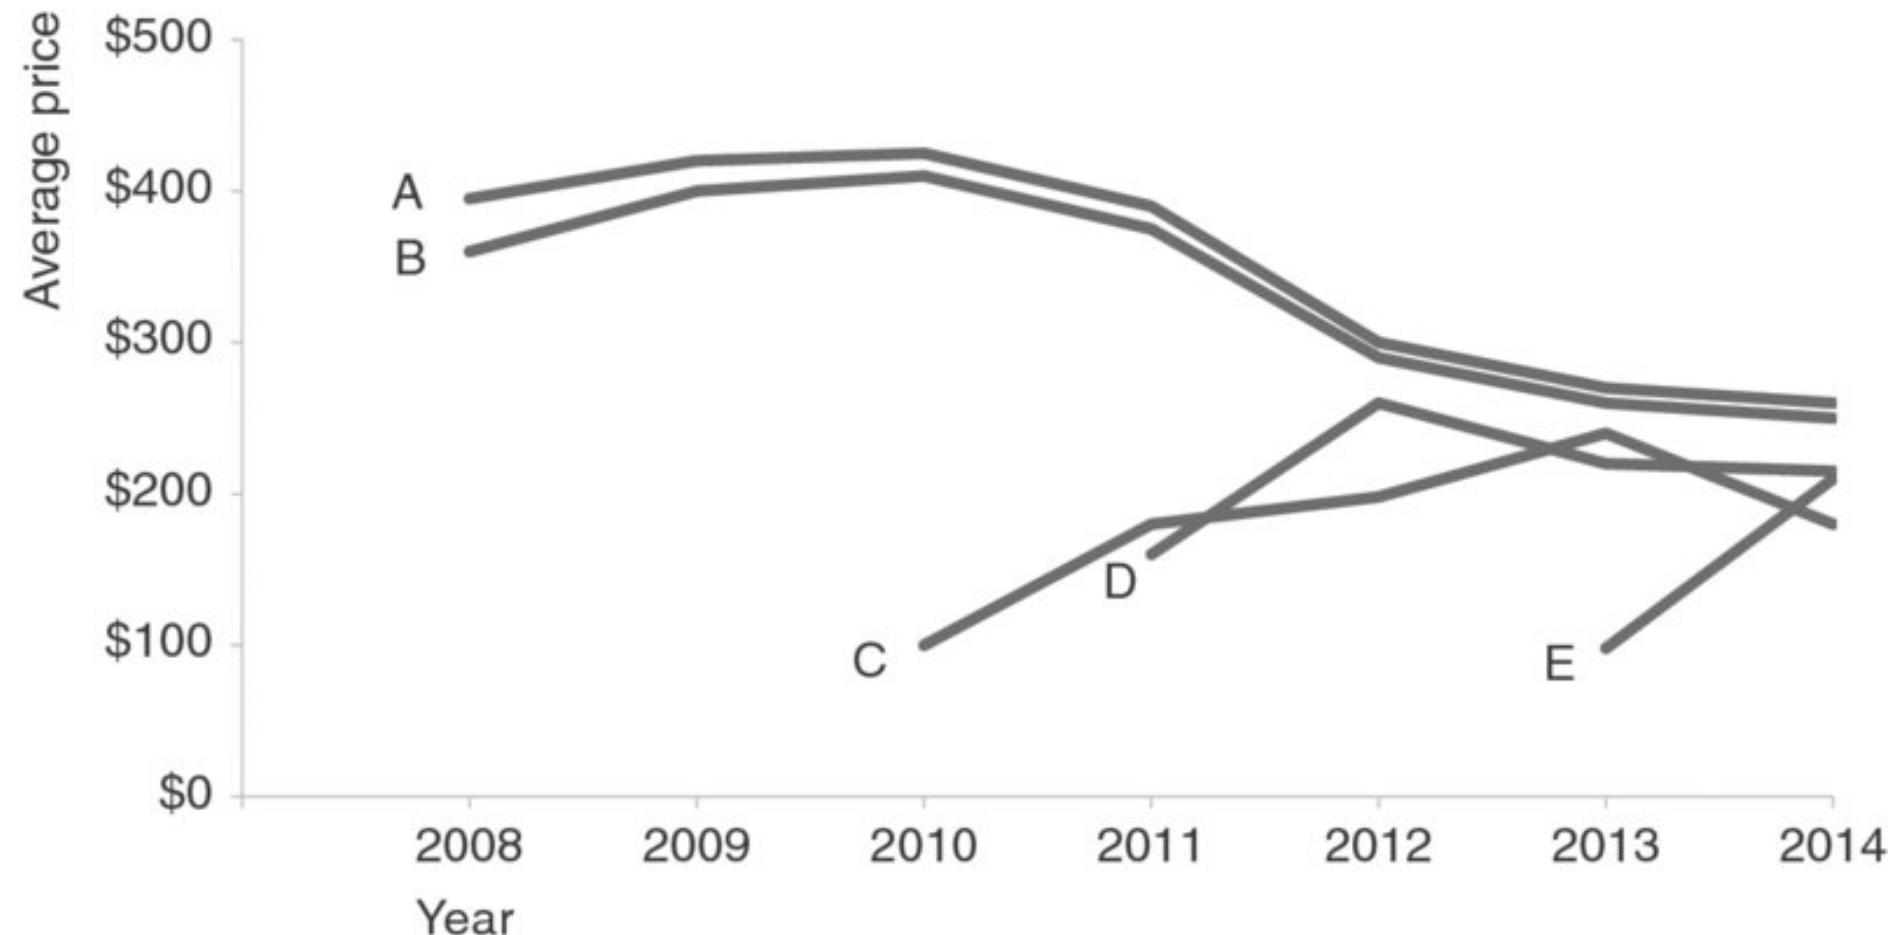

Lesson 5: think like a designer

- Already applied through this process.
- Form follows function
 - Chose a visual display (form) that will allow our audience to do what we need them to do (function) with ease.
- Visual affordances
 - Made it clear how our audience should interact with our visual. Cut clutter and de-emphasized some elements of the graph, while emphasizing and drawing attention to others.
- More to do with respect to accessibility and aesthetics:
 - **Make the visual accessible with text.**
 - Simpler text, capitalize only the first word, add axis titles
 - **Align elements to improve aesthetics.**
 - Upper-left-most align the graph title. Align the y-axis title vertically with the uppermost label and the x-axis title horizontally with the leftmost label.

Add text and align elements

Retail price over time

Lesson 6: tell a story

- Imagine we have five minutes in a live presentation setting under the agenda topic:
“Competitive Landscape—Pricing.”

- See the following sequence of slides

In the next 5 minutes...

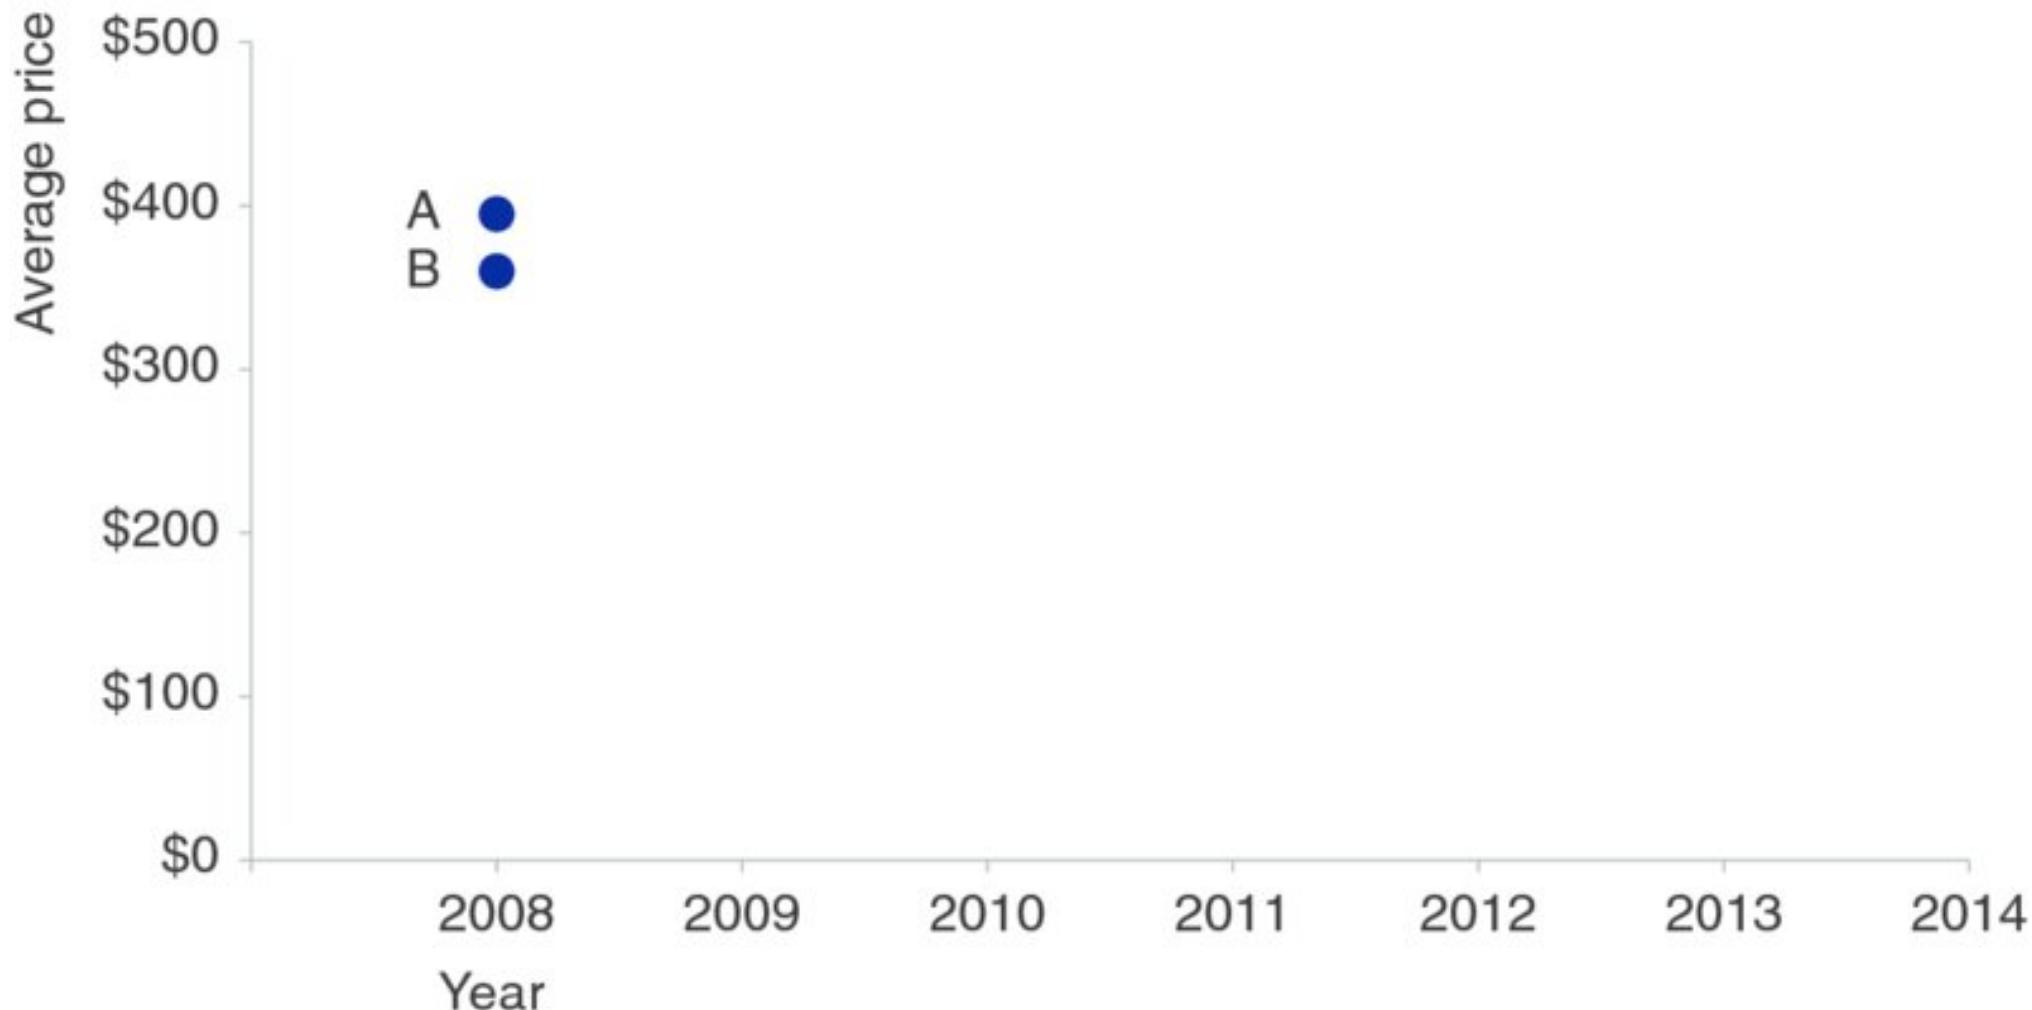

OUR GOAL:

- 1** Understand **how prices have changed over time** in the competitive landscape.
- 2** Use this knowledge to **inform the pricing of our product**.

We will end with a **specific recommendation**.

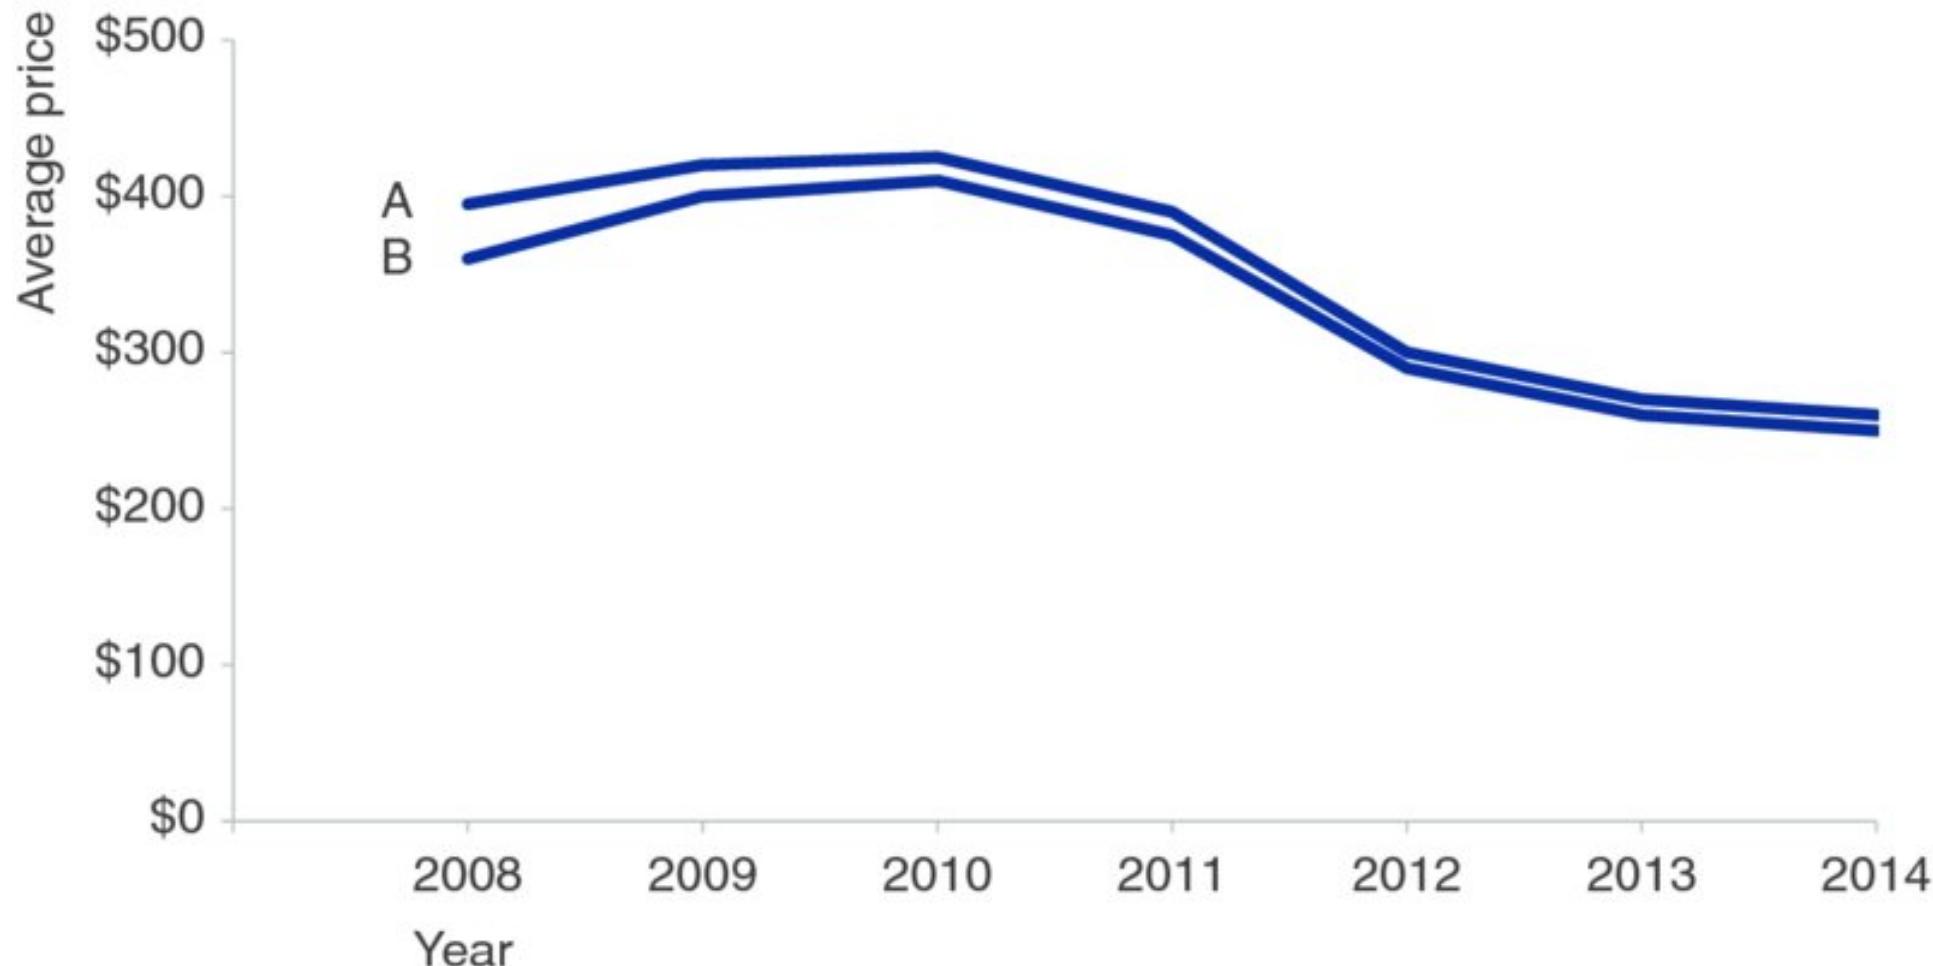

Products A and B were launched in 2008 at price points of \$360+

Retail price over time

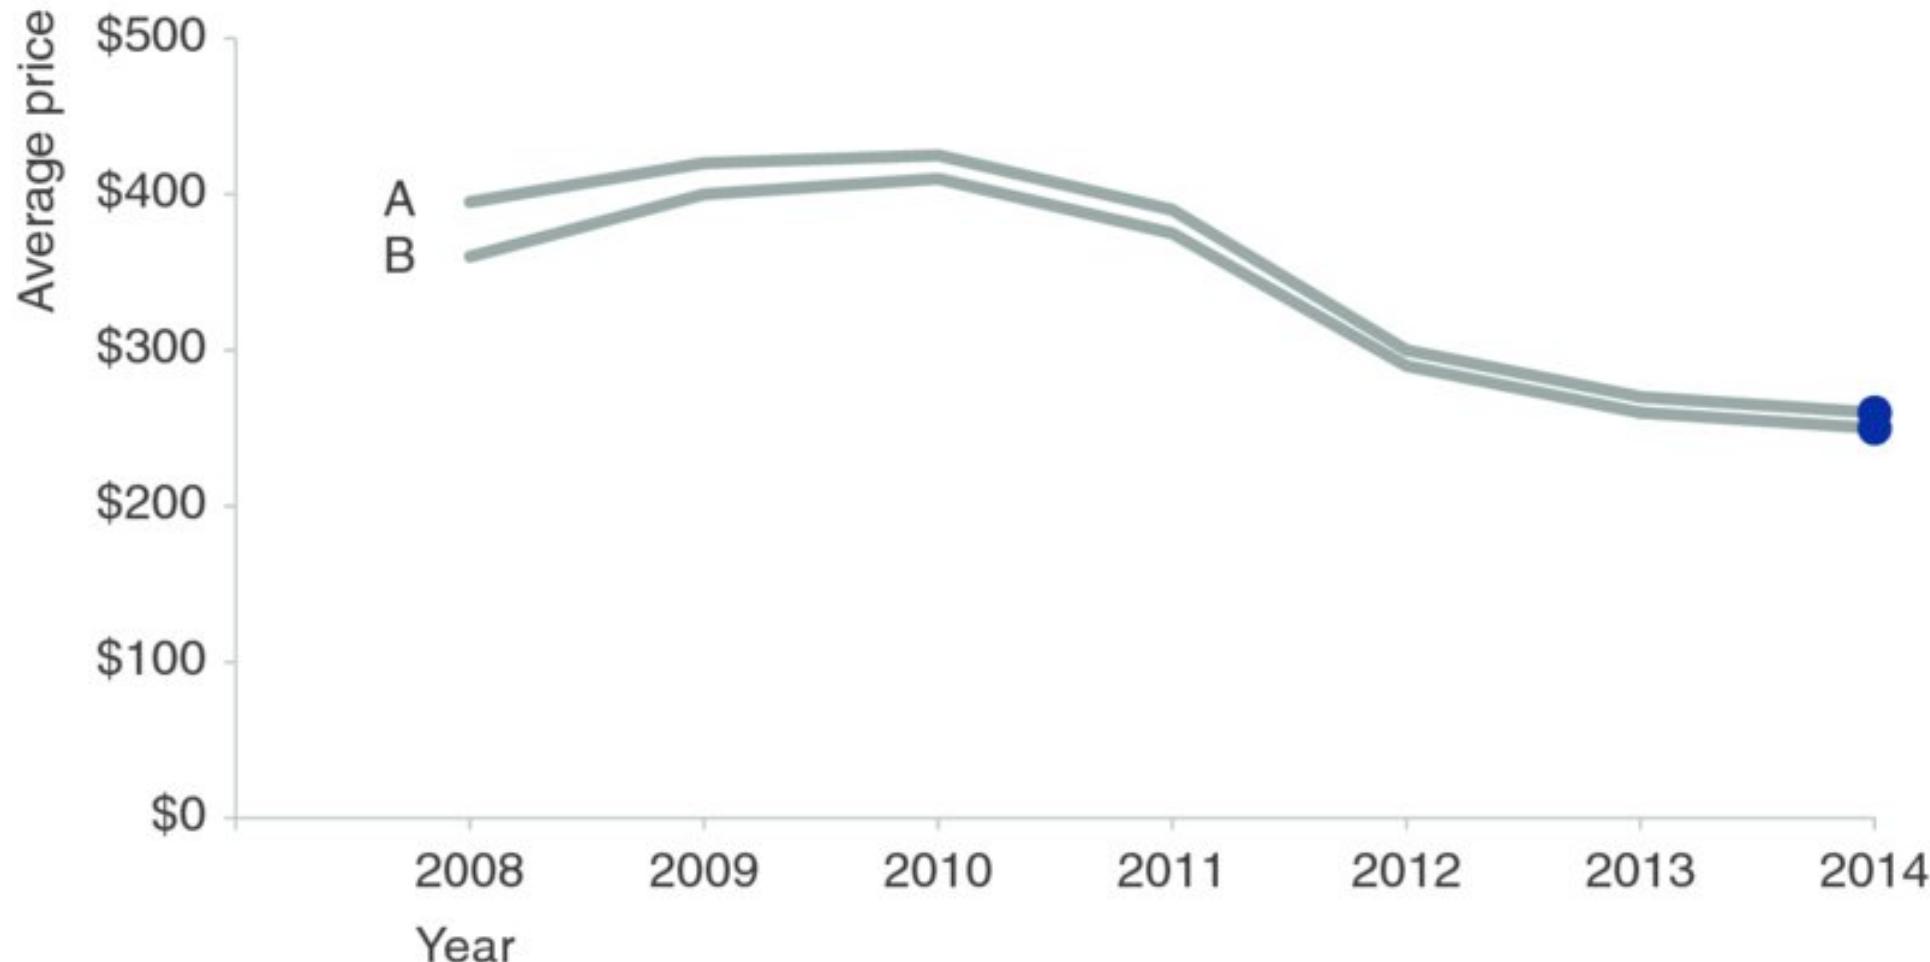

They have been priced similarly over time, with B consistently slightly lower than A

Retail price over time

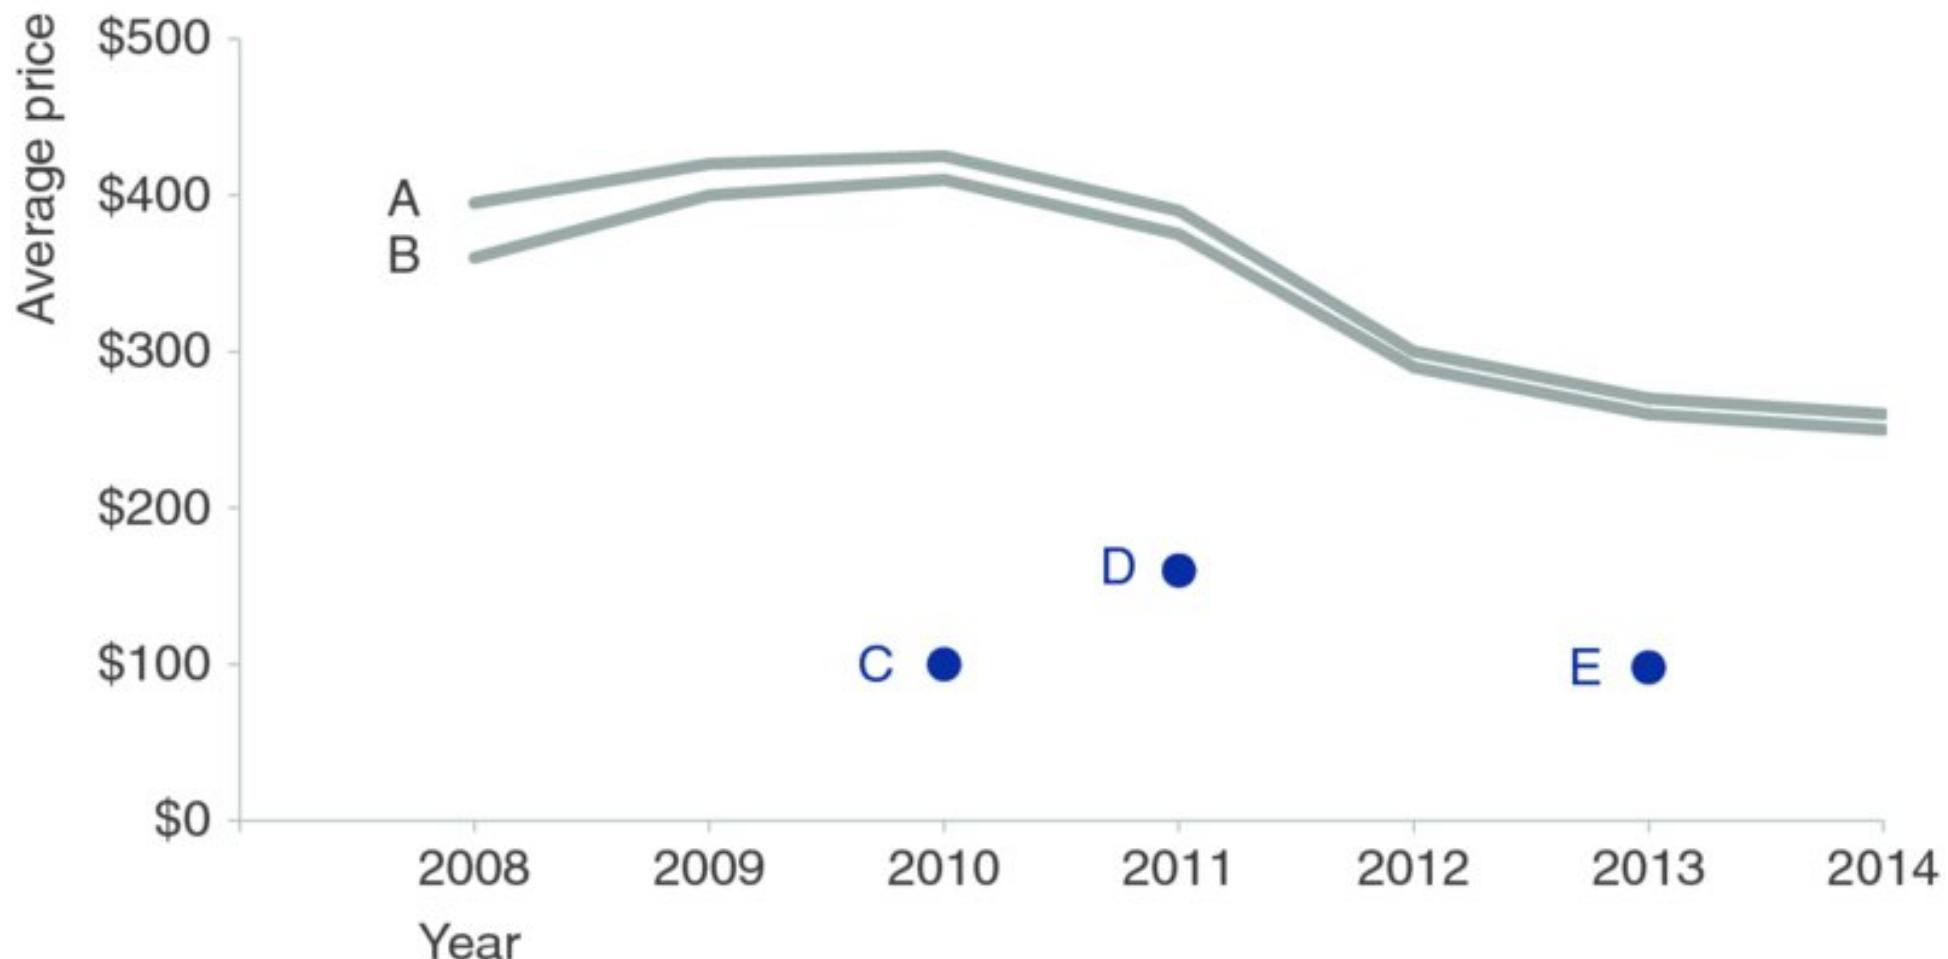

In 2014, Products A and B were priced at **\$260** and **\$250**, respectively

Retail price over time

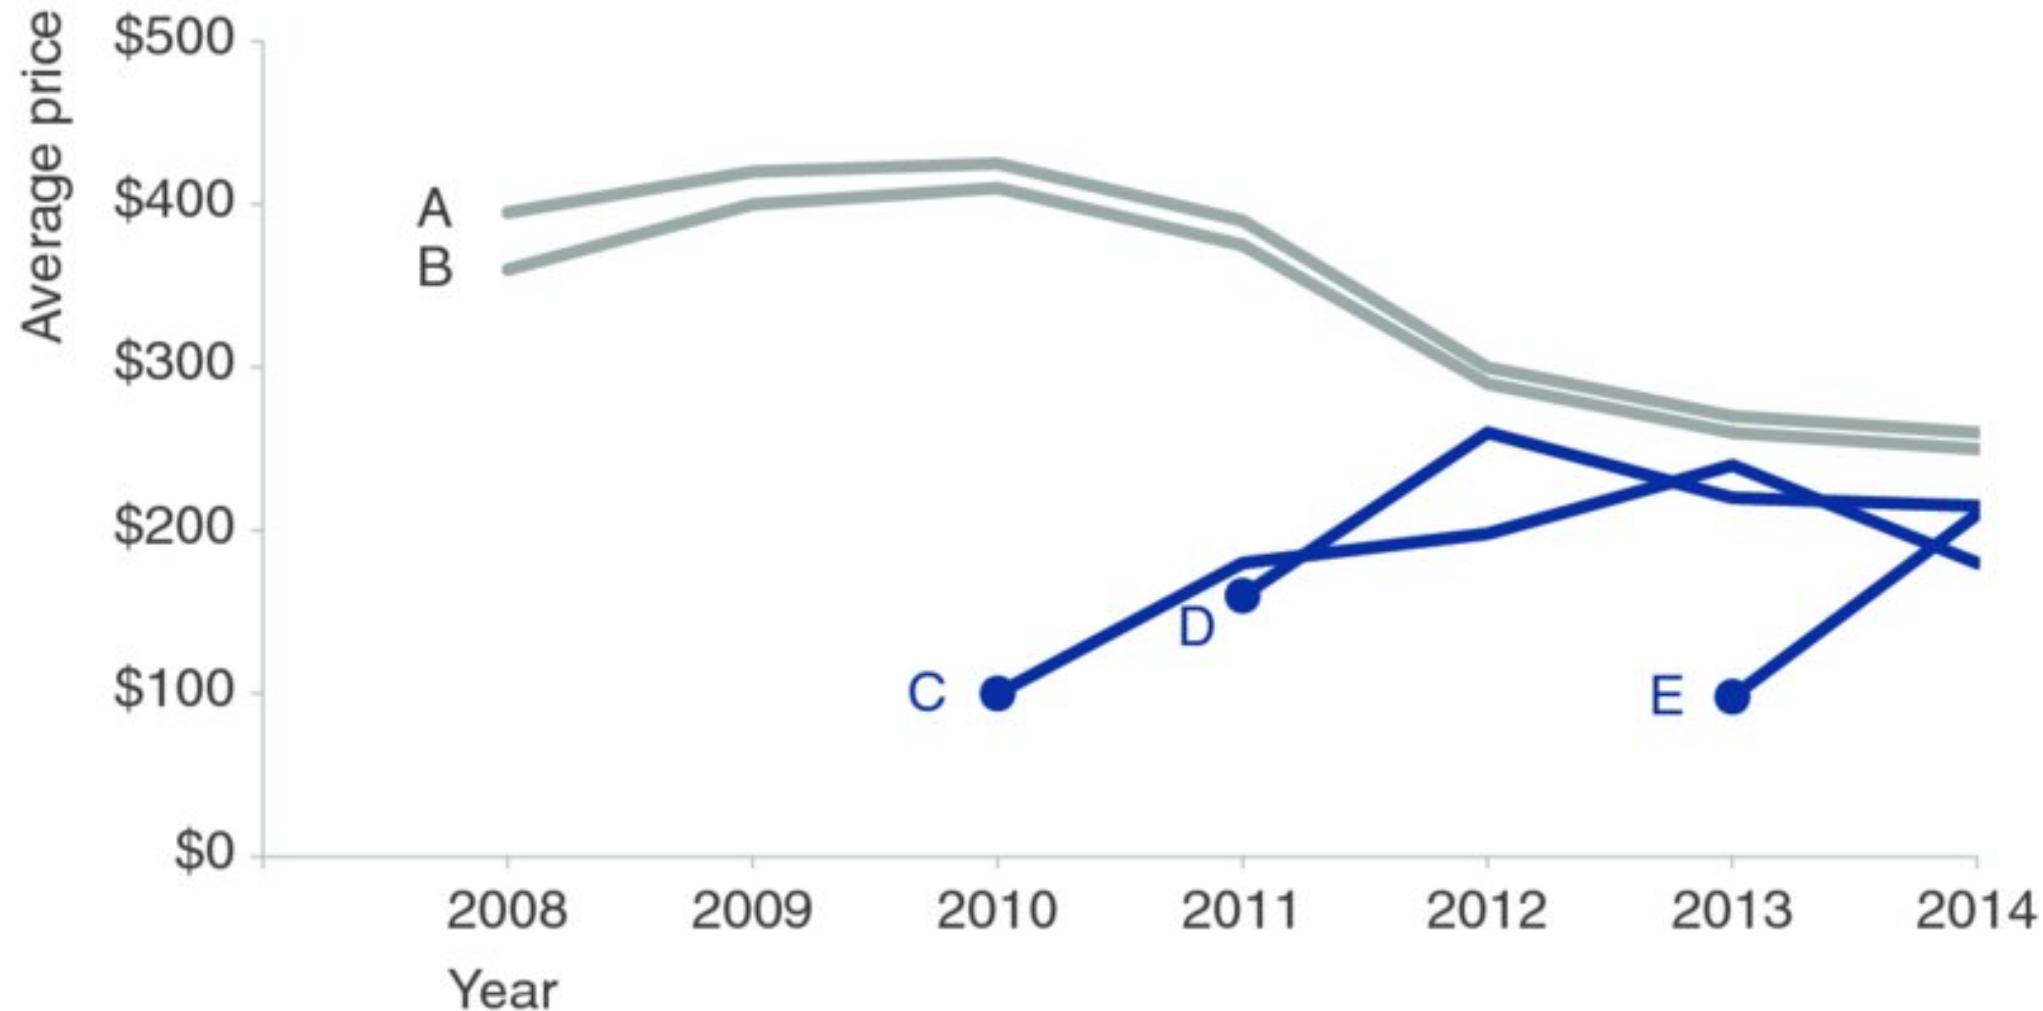

Products C, D, and E were each introduced later at **much lower price points**...

Retail price over time

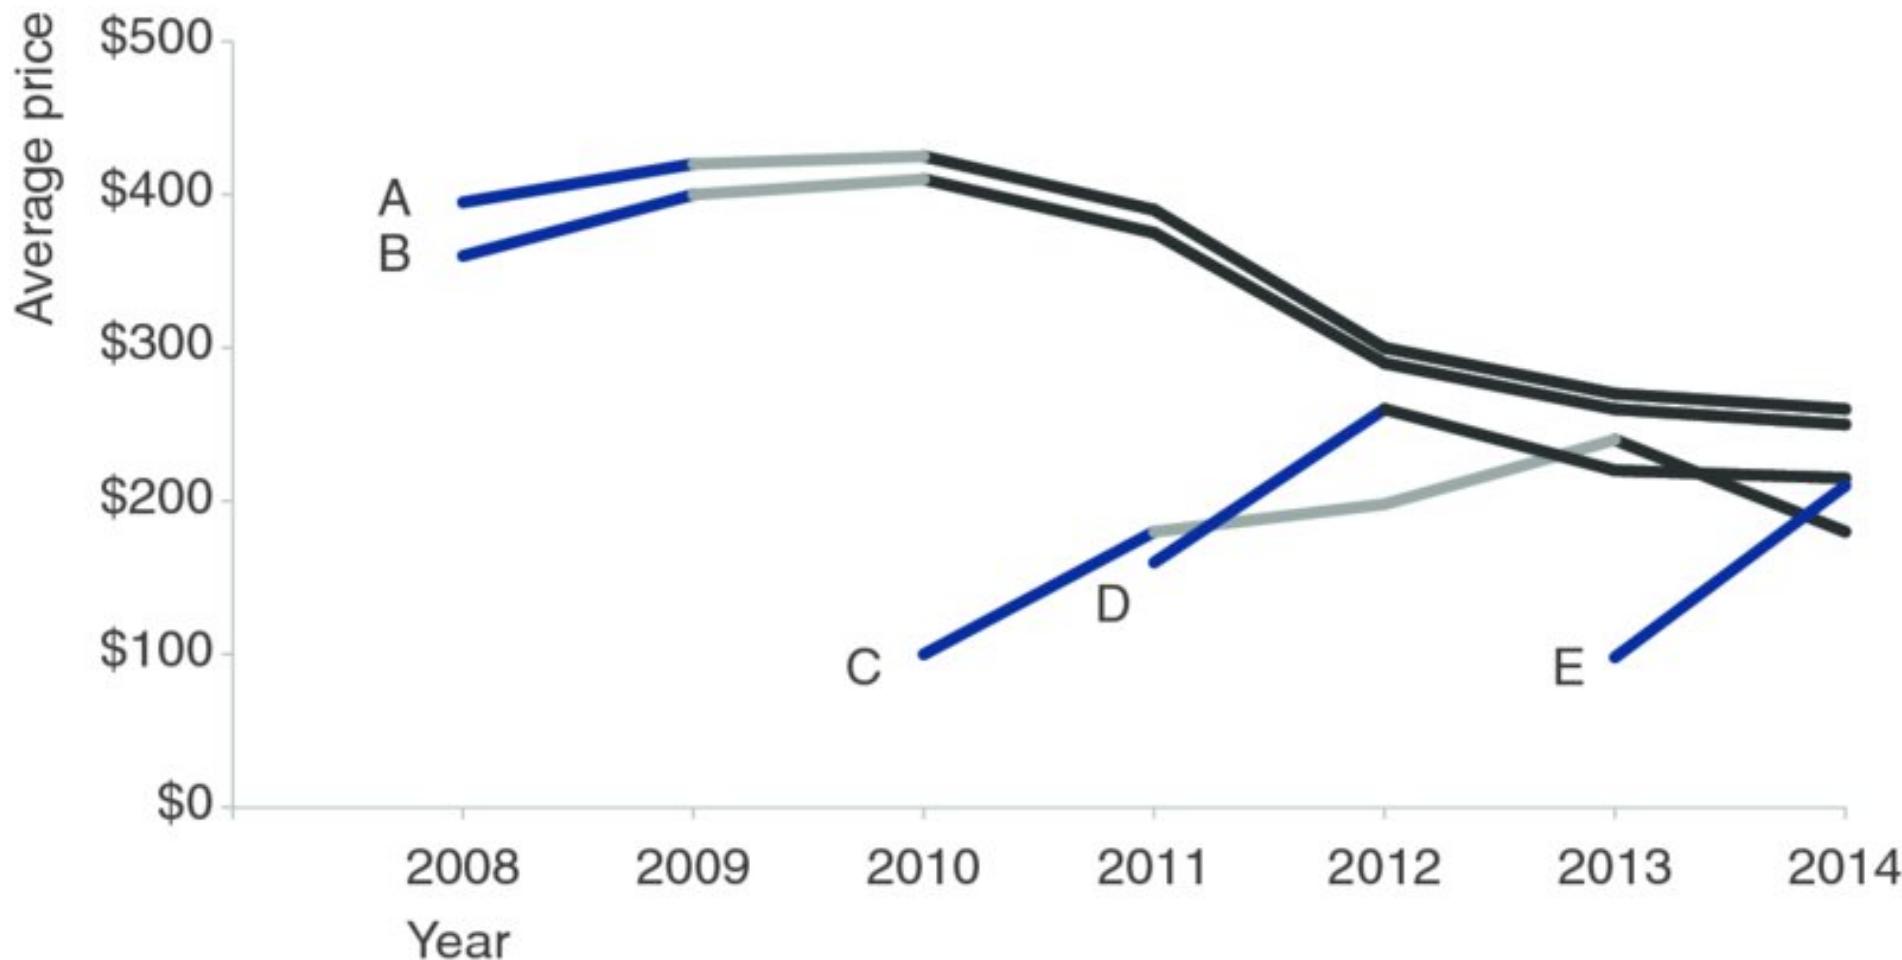

...but all have **increased in price** since their respective launches

Retail price over time

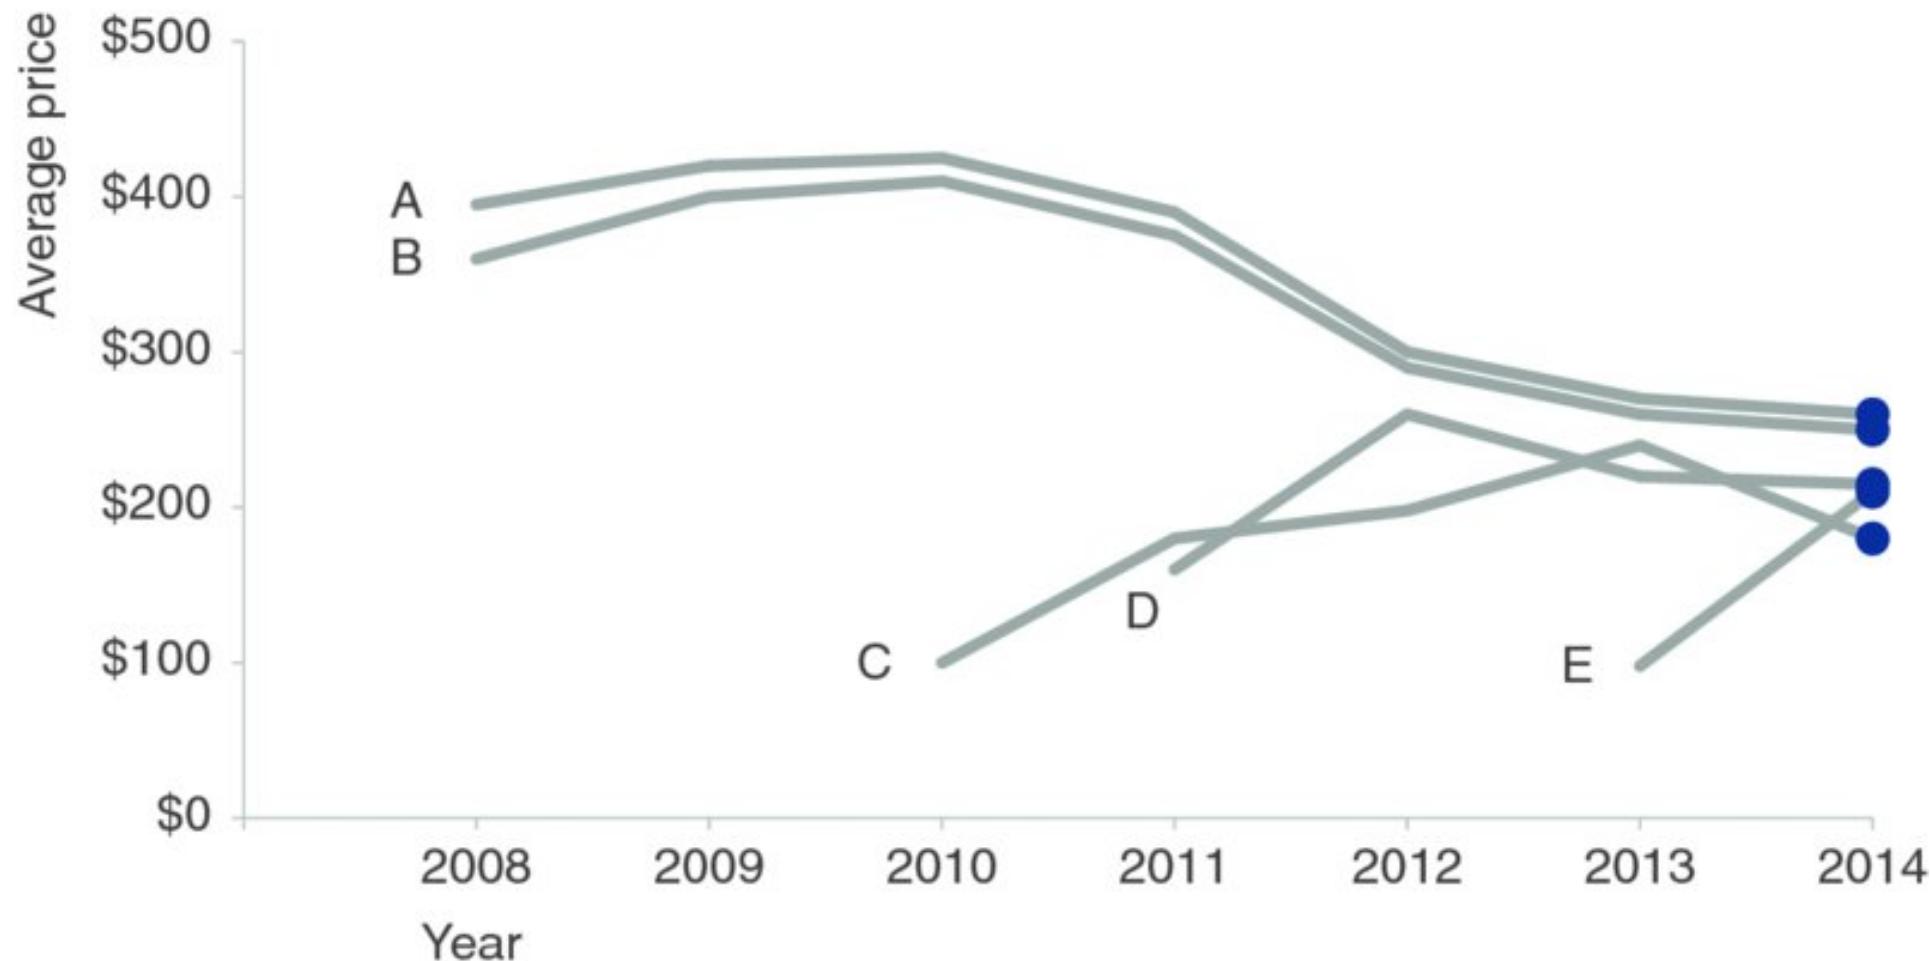

In fact, with the launch of a new product in this space, we tend to see an **initial price increase**, followed by a **decrease** over time

Retail price over time

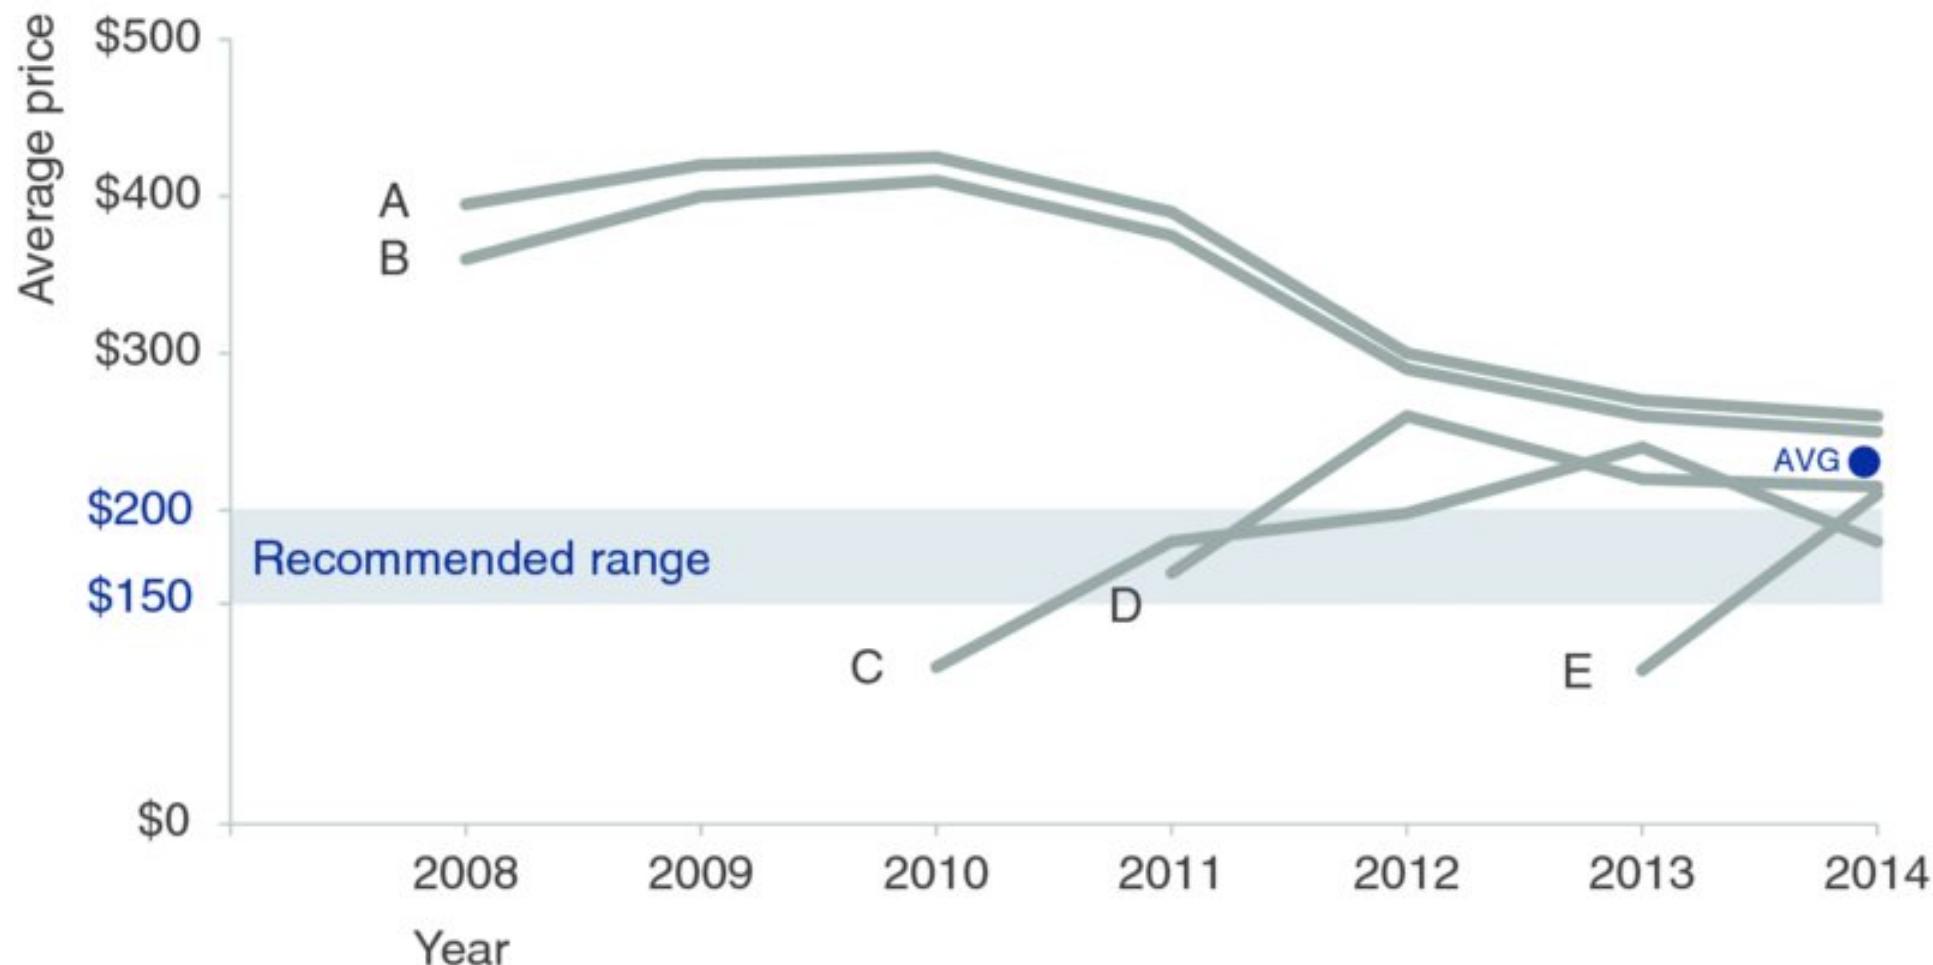

As of 2014, retail prices have converged, with an **average retail price of \$223**, ranging from a low of \$180 (C) to a high of \$260 (A)

Retail price over time

To be competitive, we recommend introducing our product *below* the \$223 average price point in the **\$150–\$200 range**

Retail price over time

Progression of the story

➤ The beginning:

- We started off by telling our audience the structure we would follow.
- Set the plot before moving to the next slide: “**As you all know, there are five products that will be our key competition in the marketplace**”

➤ The middle:

- Build the chronological price path that those products followed.
- Introduce tension in the competitive landscape when Products C, D, and E significantly undercut existing price points at their respective launches.
- Restore a sense of balance as the prices converge.

➤ The end:

- End with a clear call to action: the recommendation for pricing our product.

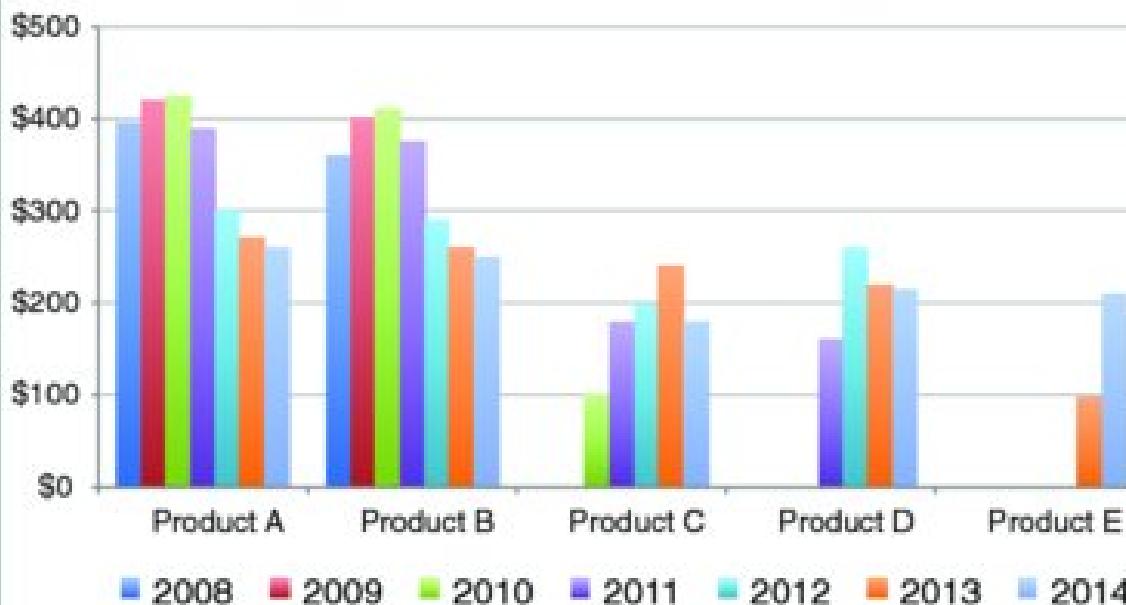

Storytelling

- Drawing audience's attention to the specific part of the story
 - By only showing the relevant points or
 - By pushing other things to the background and emphasizing only the relevant pieces and
 - By pairing this with a thoughtful narrative
- This same process when multiple visuals in a broader presentation or communication.

Before and after

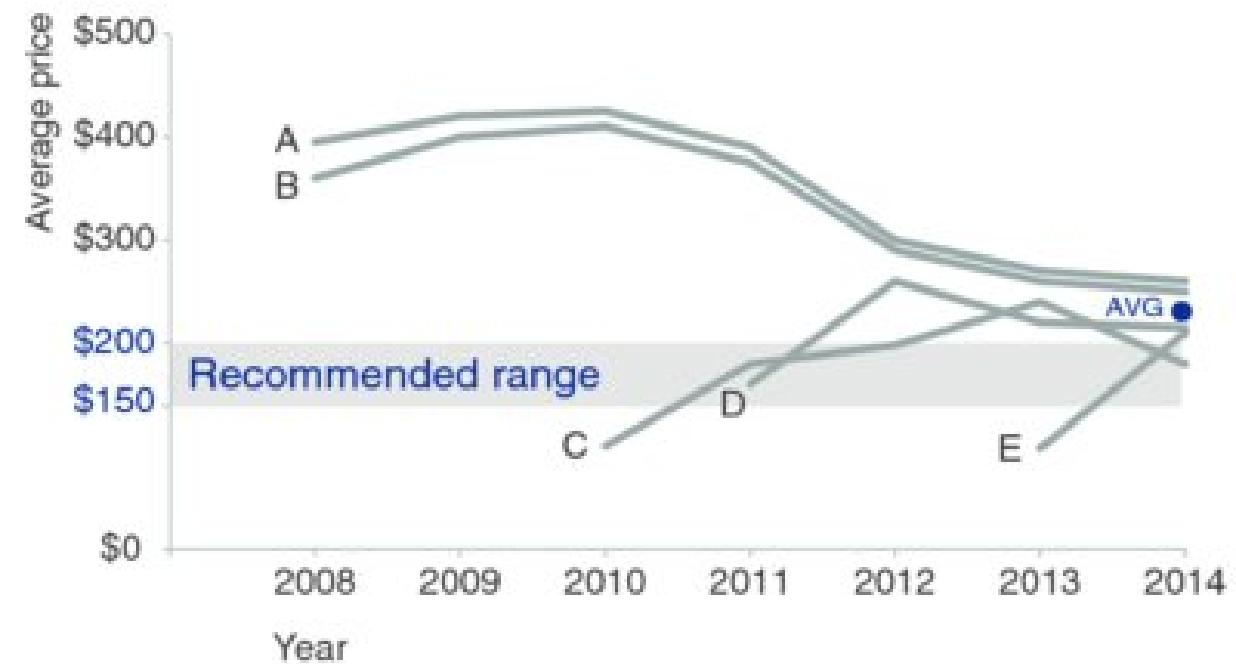

Price has declined for all products on the market since the launch of Product C in 2010

Average Retail Product Price per Year

To be competitive, we recommend introducing our product below the \$223 average price point in the \$150–\$200 range

Retail price over time
